0.1 Introduction

0.2 Sound Changes

0.2.1 Laryngeal colouring

Likely the earliest traditionally-dateable sound change in Carite, and in Indo-European in general, is **laryngeal colouring**. As its traces can be seen even within Anatolian, it is likely that an allophonic process of vowel colouring next to the laryngeals $*h_2$ $*h_3$ predates the split of the Anatolian subfamily. Early on, this had little effect on the morphology of Indo-European; only later did it influence its grammatical ablaut. Compare the following examples:

PRE-AB.	$*h_2st̥ryéh_2$	=	$*h_2st̥ryéh_2$	→	$*h_2st̥ryáh_2$	→	AB.	stirjā
PIE	$*h_2érk^wos$	=	$*h_2érk^wos$	→	$*h_2árk^wos$	→	AB.	arfos
PIE	$*péh_3tlom$	=	$*péh_3tlom$	→	$*póh_3tlom$	→	AB.	pūtlom
PIE	$*h_3ektówos$	=	$*h_3ektówos$	→	$*h_3októwos$	→	AB.	ogzowos

As in other Indo-European languages, the effects of laryngeal colouring are recoverable only for the vowel $*e$. No language shows coloring on $*o$, though it's indeterminable if this is due to only $*e$ being affected or if colored $*o$ was simply lost. The oft-reported colouring of $*o$ next to $*h_2$ in Latin and Greek is convincingly refuted by De Decker (0).

Due to how widespread this change was, examples in other branches are plentiful. Compare the following:

- Proto-Indo-European $*b^hréh_2tēr$ > °FRATERBROTHER°, Proto-Celtic $*brātīr$, Ancient Greek φρᾶτηρ, Latin *frāter*, Proto-Germanic $*brōpēr$ (through $*brāpēr$);
- Proto-Indo-European $*h_2érh_3trom$ > °PLOUGHARD°, Proto-Celtic $*aratrom$, Ancient Greek ἄροτρον, Latin *arātrum*, Proto-Germanic $*arþraz$;
- Proto-Indo-European $*déh_3nom$ > °GIFTDONUM° (through $*dōnom$), Proto-Celtic $*dānus$ (through $*dōnus$), Latin *dōnum*; Proto-Indo-European $*déh_3rom$ > Ancient Greek δῶρον; Proto-Indo-European $*b^hleḥ_3tís$ > Proto-Germanic $*blōdiz$;
- Proto-Indo-European $*h_3éwis$ > °OWISSHEEP°, Proto-Celtic $*owis$, Ancient Greek ὄϊς, Latin *ovis*, Proto-Germanic $*awiz$ (through $*owiz$).

The vocalism in °GIFTDONUM° is the result of a later raising of stressed $*ō$. Note that the vocalism in Proto-Germanic $*brōpēr$ reflects a later merger of $*ā$ into $*ō$, and the vocalism in Proto-Germanic $*awiz$ reflects a later merger of $*o$ into $*a$.

0.2.2 Cluster assimilation

Obstruent clusters undergo **regressive voicing assimilation**. This process is also extremely early, though its age relative to laryngeal voicing cannot be determined. Observe the following examples:

PIE	$*ṃdtós$	=	$*ṃdtós$	→	$*ṃttós$	→	AB.	azdos
-----	----------	---	----------	---	----------	---	-----	-------

This change also operated when the cluster included aspirates: they can be assumed to also be voiced, or breathily/partially voiced, to begin with. All aspirates in such clusters presumably become

voiceless aspirates, but their result cannot be shown to be different from regular voiced obstruents: presumably, this aspiration is lost early enough internally to merge their outcome with that of regular *tenues*, and not (the somewhat later) voiceless aspirates.

PIE *méǵ^hsri → *mék^hsri → *méksri → AB. meksri

Later on, s-mobile arose and proliferated. This had a different behavior, promoting progressive voicing assimilation under **Siebs' Law**. This had the effect of changing morphological |*sB *sBh| into |*sP|:

It is not clear if the voiceless aspirates remained phonemic for long — in any case, in Carite, they behave identically to the regular voiceless *tenues* and presumably merged shortly after if they ever were distinct in the first place.

0.2.3 Dental degemination

As part of the **degemination of dentals**, the first dental (i.e. alveolar plosive) was affricated, likely already in Proto-Indo-European times, and then the resulting cluster was simplified:

PIE *b^héd^htrom → *b^héttrom → *b^héstrom → AB. pestrom

This process continued to be a productive morphophonological alternation. This development mirrors the degemination in Greek:

- Proto-Indo-European *b^héy^dtis > °BHIDHTIS°, Ancient Greek πίστις;

Compare this to Italic, Celtic and Germanic, where the degemination of dentals resulted in *ss:

- Proto-Indo-European *sed^tós > Proto-Germanic *sessaz, Latin sessus;
- Proto-Indo-European *med^tós > Proto-Celtic *messos.

It is likely the change was not complete yet in Celtic in Proto-Celtic times, as we find an intermediate stage in Gaulish.

0.2.4 Thorn clusters

The treatment of **thorn clusters** sets Common Indo-European apart from Early Indo-European: none of these languages preserve them intact, i.e. as coronal-dorsal clusters. In Carite, thorn clusters underwent metathesis:

PRE-AB. *tétklom = *tétklom → *téktlom → AB. tektlom

Metathesis of thorn clusters is a trait shared with Celtic and Greek as shown below:

- Proto-Indo-European *d^hǵ^hési > °YESTERDAYWORD° (through *gdesi), Proto-Celtic *gdesi, Ancient Greek χθές.

The assibilation of the dental in °YESTERDAYWORD° will be discussed later. In the other western branches, the clusters were simply reduced:

- Proto-Indo-European **d^hǵ^hemelos* > Latin *humilis*; compare to °LOWWW° and Ancient Greek χαμαλός;
- Proto-Indo-European **d^hǵ^hésros* > Proto-Germanic **gestraz*.

0.2.5 Osthoff's Law

Another early process in Carite history, shared with Italo-Celtic, Greek, and probably Germanic, is **Osthoff's Law**: long vowels shorten when preceding a resonant that's followed by a consonant:

$$\text{PIE } *t\acute{p}\acute{e}rsneh_2 \rightarrow *t\acute{p}\acute{e}rsnah_2 \rightarrow *t\acute{p}\acute{e}rsnah_2 \rightarrow \text{AB. } pern\bar{a}$$

Osthoff's Law continued to be productive until after the loss of laryngeals in all branches, but in Carite, it acted as a surface filter for a particularly long time, continuing to affect later loans and formations all the way until the loss of vowel length in the medieval period. The example below illustrates how it divides western Indo-European from eastern languages such as Sanskrit:

- Proto-Indo-European **t\acute{p}\acute{e}rsneh_2* > °HEEL1°, Ancient Greek πτέρνη, Latin *perna*, Proto-Germanic **fersnō*; compare to Sanskrit षष्ठः.

In subsequent changes, Osthoff's Law, as a surface filter, will continue to be pointed out.

0.2.6 Saussure Effect

Laryngeals between a resonant and a consonant were lost, provided that the resonant was preceded by *o; this is known as the **Saussure Effect**. While it is unclear if this effect already affected Proto-Indo-European proper or if it's a later development, it is nonetheless shared by many branches, Carite included:

$$\text{PIE } *solh_2n\acute{o}s = *solh_2n\acute{o}s \rightarrow *soln\acute{o}s \rightarrow \text{AB. } holnos$$

0.2.7 Centumisation

Centumisation in Carite took place somewhat late, and only after the **coalescence** of a sequence of a back velar followed by *w into a single labiovelar consonant:

$$\text{PRE-AB. } *siskw\acute{o}s = *siskw\acute{o}s \rightarrow *sisk^w\acute{o}s \rightarrow \text{AB. } hizvos$$

It is worth noting that Greek, in order to preserve the length caused by the original cluster, rendered them as geminates instead.

The typical actual centumisation involved the unconditional merger of the palatovelars into regular velars as follows:

$$\begin{array}{llllllll} \text{PIE} & *t\acute{e}knom & = & *t\acute{e}knom & \rightarrow & *t\acute{e}knom & \rightarrow & \text{AB. } teknom \\ \text{PRE-AB.} & *b^h\acute{e}h_2\acute{g}eh_2 & \rightarrow & *b^h\acute{a}h_2\acute{g}ah_2 & \rightarrow & *b^h\acute{a}h_2\acute{g}ah_2 & \rightarrow & \text{AB. } p\bar{a}g\bar{a} \\ \text{PIE} & *g^h\acute{o}lh_3\acute{e}h_2 & \rightarrow & *g^h\acute{o}lh_3\acute{a}h_2 & \rightarrow & *g^h\acute{o}lh_3\acute{a}h_2 & \rightarrow & \text{AB. } hol\bar{a} \end{array}$$

This reduced the triple-contrast velar series to one that only contrasted plain and labialised. Centumisation is shared with the other western languages:

- Proto-Indo-European **swékuros* > °SEKURUSFATHER°, Proto-Celtic **swekrVnos*, Ancient Greek ἑκυρός, Latin *socer*, Proto-Germanic **swehrô* (through **swekrô*);
- Proto-Indo-European **génus* > °GENWII°, Proto-Celtic **genus*, Ancient Greek γένυς, Latin *gena*, Proto-Germanic **kinnuz* (through **ginnuz*);
- Proto-Indo-European **ǵʰéyōm* > °WINTER°, Proto-Celtic **gyemos* (through **ǵʰyemos*), Ancient Greek χεῖμα, Latin *hiems* (through **ǵʰiems*), Proto-Germanic **gōin-* (through **ǵʰōin-*).

Carite is peculiar in that the late centumisation, which only occurred after the coalescence of a sequence of a plain velar and **w*, allows for an original contrast that is not found in the other western languages as they also merged palatovelars followed by **w* with the labiovelars. For example, compare how Carite, unlike its sister centum branches, retains a sequence of a palatovelar and **w* as a cluster as opposed original labiovelars and the sequence of a plain velar and **w* which later shifted to fricatives as seen in the examples above — this will be discussed in greater detail later:

- Proto-Indo-European **h₁ékwos* > °EKWOS°, not ***εφος* (***efos*); compare to Proto-Celtic **ek^wos*, Ancient Greek ἵππος (through **ikk^wos*), Latin *equus*, Proto-Germanic **ehwaz* (through **ekwaz*);
- Proto-Indo-European **dnǵʰwéh₂s* > °DAGWAA°, not ***διμηθᾶ* (***dimvā*); compare to Proto-Celtic **tang^wāts* (through **tang^wāts*), Latin *lingua* (through **ling^wā*), Proto-Germanic **tungō* (through **tung^wō*).

Original **ǵw* clusters are not included in the examples above as none such cluster were continued into Carite; however, we can safely assume that it would probably have had the same fate. It is worth noting that in Germanic, the fact labiovelars are written as **Cw* rather than **C^w* is purely an orthographical convention and does not mean they are clusters. The loss of the labialisation in Proto-Germanic **tungō* is a result of delabialisation after **un*.

0.2.8 Laryngeal and syllabic sonorant development

The Proto-Indo-European laryngeals, which (mostly) disappeared in almost all branches, left behind traces before doing so. Besides the laryngeal colouring mentioned earlier, which was presumably much older, the **first laryngeal loss** marks the start of a long process of laryngeal deletion:

$$\text{PRE-AB. } *h_2wéh_1ntos = *h_2wéh_1ntos \rightarrow *h_2wéntos \rightarrow \text{AB. } fentos$$

As Osthoff's Law continued to be in effect, vowels were prevented from being lengthened if they were followed by a resonant and another consonant.

Syllabic sonorants and laryngeals adjacent to them interacted in many branches, Carite included. Similar to Celtic, Greek and Latin, Carite inserted a prop vowel between any syllabic sonorant and a laryngeal, moving the syllabicity from the sonorant to this new prop vowel:

PIE	<i>*glh₁ís</i>	=	<i>*glh₁ís</i>	→	<i>*gləh₁ís</i>	→	AB.	<i>glīs</i>
PIE	<i>*ŋkm̥h₂nós</i>	→	<i>*ŋkm̥h₂nós</i>	→	<i>*ŋkməh₂nós</i>	→	AB.	<i>akmūnos</i>
PIE	<i>*str̥h₃tós</i>	=	<i>*str̥h₃tós</i>	→	<i>*strəh₃tós</i>	→	AB.	<i>strōdos</i>
PIE	<i>*h₁ŋg^wnís</i>	=	<i>*h₁ŋg^wnís</i>	→	<i>*h₁əng^wnís</i>	→	AB.	<i>amvnīs</i>
PIE	<i>*h₂r̥grós</i>	→	<i>*h₂r̥grós</i>	→	<i>*h₂ərgros</i>	→	AB.	<i>argros</i>
PIE	<i>*h₃r̥d^hwós</i>	=	<i>*h₃r̥d^hwós</i>	→	<i>*h₃ərd^hwós</i>	→	AB.	<i>ordūs</i>

Next, syllabic sonorants lost their syllabicity with an epenthetic vowel $*\bar{a}$ being inserted to compensate. The exact resolution depended on the environment. Syllabic nasals turned into $*a$ when preceded by at least two consonants, while syllabic liquids inserted a prop vowel after them in the same environment. All remaining syllabic sonorants simply ejected a prop vowel before them:

PIE	$*h_1l̥g^w hr̥ós$	=	$*h_1l̥g^w hr̥ós$	→	$*h_1lag^w hr̥ós$	→	AB.	lavros
PIE	$*p̥r̥sth_2óm$	=	$*p̥r̥sth_2óm$	→	$*pr̥sth_2óm$	→	AB.	prizdom
PIE	$*l̥nd^héh_2$	→	$*l̥nd^háh_2$	→	$*l̥nd^háh_2$	→	AB.	lindā

It is likely that the reflex of nasals before clusters started off as a nasalised neutral vowel – $*\bar{a}$ – which later lost its nasalisation and neutralised differently than its oral equivalent, most importantly not engaging in the vowel colouring that would later take place.

Whenever a laryngeal was surrounded by two true consonants – that is, all consonants excluding the semivowels $*y$ $*w$ – it inserted a prop vowel after itself:

PRE-AB.	$*ph_2tr̥ós$	=	$*ph_2tr̥ós$	→	$*ph_2ətr̥ós$	→	AB.	padros
---------	--------------	---	--------------	---	---------------	---	-----	--------

0.2.9 Prop vowel colouring

The precise reflex of the recently created prop vowels heavily depended on their environment. First of all, it took up rounding from any previous consonant:

PIE	$*g^w h̥ntós$	→	$*g^w h̥antós$	→	$*g^w huntós$	→	AB.	hundos
PIE	$*kánm̥$	→	$*kánm̥ən$	→	$*kánmun$	→	AB.	kammun

Due to the regressive action of the *boukolos* rule, which delabialised labiovelars next to $*u$, this delabialised any labiovelar after which it occurred:

PIE	$*g^w h̥ntós$	→	$*g^w huntós$	→	$*g^h untós$	→	AB.	hundos
-----	---------------	---	---------------	---	--------------	---	-----	--------

It is worth noting that this did not affect new sequences of $*wu$, which stayed as is.

The prop vowel took colour from surrounding laryngeals much like older $*e$:

PRE-AB.	$*d^h h_1syós$	→	$*d^h h_1əsyós$	→	$*d^h h_1esyós$	→	AB.	tezjos
PIE	$*semh_2lós$	→	$*semh_2əlós$	→	$*semh_2alós$	→	AB.	hamalos
PIE	$*ṇh_3dós$	→	$*nəh_3dós$	→	$*noh_3dós$	→	AB.	nōdos

Finally, any remaining prop vowels merged into $*u$ when directly preceding $*m$, while all other prop vowels lost their distinctiveness by merging into $*i$:

PIE	$*sept^r̥m$	→	$*septám$	→	$*septúm$	→	AB.	hebdom
PIE	$*h_2erg̥ntóm$	→	$*h_2arg̥ntóm$	→	$*h_2argintóm$	→	AB.	argindom

As can be seen above, the treatment of syllabic sonorants and laryngeals in these contexts is particularly complicated, and the same can be said for the other western branches. The following comparison will remain superficial and simplified; as such, the reader is advised to read more specialised sources if

they wish to learn more.

Syllabic sonorants interacting with adjacent laryngeals is a feature shared with Celtic, Greek and Latin, but not Germanic, which simply ignored the laryngeals as if they didn't exist and treated these clusters just like it treated lone syllabic sonorants: by inserting a **u* before them. The later colouring of the prop vowel by adjacent laryngeals is only shared with Greek, however, and referred to as the so-called **triple reflex**. In other branches, the outcome tended to be an a-vocalism instead. Compare the following:

- Proto-Indo-European **(h₂)wǵh₁neh₂* > °WLANA°, Proto-Celtic **w(u)lān-*, Ancient Greek λῆνος, Latin *lāna*; compare to Proto-Germanic **wullō*;
- Proto-Indo-European **ǵr̥h₂nóm* > °GRANUMGRAIN°, Proto-Celtic **grānom*, Latin *grānum*; compare to Proto-Germanic **kurnq*; Proto-Indo-European **p̥l̥h₂Kyēti* > °ISTRIKE°, Ancient Greek πλῆσσω;
- Proto-Indo-European **ǵnh₃tós* > °GNOTUSKNOWN°, Proto-Celtic **gnātos* (through **gnōtos*), Ancient Greek γνωτός, Latin *nōtus*.

The resulting vocalisations of syllabic sonorants and the position of the newly inserted vowel is particularly complicated in Carite, but significantly easier in the other branches. In Celtic, **i* appeared after syllabic liquids when between any consonant and a stop or **m*, while **a* appeared in every other case. In Latin, **o* appeared before liquids, but **e* did for everything else; special developments are included in papers such as Prósper (2017). The Greek development is considerably more complicated and readers are advised to consult Sihler (1995) and papers such as Mihaylova (2012) for an elaborate exposition. Germanic, as mentioned before, was very straightforward as it simply put **u* before the syllabic sonorants. Some examples are included below:

- Proto-Indo-European **dék̑m* > °10°, Proto-Celtic **dekam*, Ancient Greek δέκα, Latin *decem*, Proto-Germanic **tehun* (with secondary **-n* for **-m*);
- Proto-Indo-European **m̥rtós* > °MORTUUSDEAD°, Proto-Celtic **marwos*, Ancient Greek βροτός, Latin *mortuus*, Proto-Germanic **murþq*.

In the same fashion, Carite has environment-dependent outcomes like the other branches did.

0.2.10 Engels' Law

An unusual but well-documented Carite change is the effect of laryngeals on consonants in word-initial position. They voiced plosives and sibilants, probably through a process of glottalisation:

PIE	<i>*h₁k̑mtóm</i>	→	<i>*h₁kumtóm</i>	→	<i>*h₁gumtóm</i>	→	AB.	<i>gundom</i>
PRE-AB.	<i>*h₁sh₂néh₂</i>	→	<i>*h₁sh₂anáh₂</i>	→	<i>*h₁zh₂anáh₂</i>	→	AB.	<i>zanā</i>

Similarly, semivowels underwent fortition, with **y* surfacing as **k* and **w* surfacing as **k^w*. Importantly, however, is that the fortition of **y* only took place following **h₁*, as opposed to the other consonants, which underwent this change regardless of which of laryngeal:

PIE	<i>*h₁yós</i>	=	<i>*h₁yós</i>	→	<i>*h₁kós</i>	→	AB.	<i>kos</i>
PRE-AB.	<i>*h₁wid^hwéh₂</i>	→	<i>*h₁wid^hwáh₂</i>	→	<i>*h₁k^wid^hwáh₂</i>	→	AB.	<i>fidwā</i>

A longstanding hypothesis is that the fortition of **h₁y* resulted in **k̑*, which hadn't merged into **k* yet. This opinion is somewhat controversial, but is unfalsifiable because what sound exactly that **y*

fortited to is impossible to know for sure. The fact only **h₁* affected **y* is in line with its word-initial treatment in Greek and can be explained through Byrd's improvement of Pinault's Law; this would imply **h₂ *h₃* would have been lost before **y* before this phonological change could have taken place. For more information, please refer to Bozzone (2013).

This change is occasionally termed **Engels' Law**, and it was first posited by the Limburgish philologist Klaus Engels.

It is likely that at this point, the laryngeals lost differentiation and merged into one general laryngeal continuant, completing the **merger of laryngeals**:

PIE **ṛkṃh₂nós* → **akmuḥ₂nós* → **akmuHnós* → AB. *akmūnos*

The next loss of laryngeals (**second laryngeal loss**) happened to sequences of vowels with a laryngeal:

PIE **lówksneh₂* → **lówksnaH* → **lówksnā* → AB. *lūksnā*
 PRE-AB. **keh₁énos* → **keHénos* → **kénos* → AB. *kīnos*

The lengthening of contracted laryngeal sequences still obeyed Osthoff's Law, shortening the new vowels when followed by a sequence of a resonant plus obstruent. Examples of this process are scant, but they are evident in the so-called conjunctive nominals, which, in early Carite, take special forms in subordinate clauses and in coordinated clauses. A typical example of this is with the masculine noun °EKWOS°: its genitive plural is attested as both the ordinary *εκῶωμ* (*ekwōm*) and the conjunctive *εκῶωφε* (*ekwomfe*) — the length of the vowel in the suffix is indicative of Osthoff's Law. With the deletion of the laryngeal and subsequent compensatory lengthening, any allophonous colouring effects were phonemicised.

After this, the laryngeals failed to effect any further changes, and were likely lost shortly thereafter, completing the **third laryngeal loss**:

PIE **h₂éng^whis* → **Háng^whis* → **áng^whis* → AB. *amvis*

This included all word-initial laryngeals immediately followed by a consonant, which were lost in all daughters except for Anatolian, Greek, Armenian, and Phrygian. It is worth noting this change phonemicised what used to be allophones; i.e. the colouring of **e* and Engels' Law.

0.2.11 Davide's Law

One of the longstanding issues in the evolution from Proto-Indo-European to Abean was the surfacing of some **e *ē* as **a *ā*. This shift is called **Davide's Law**, and it must have taken place following the dissolution of syllabic sonorants and laryngeals, but before the collapse of the three-way plosive system and (presumably) the fricativisation of the labiovelars. Davide's Law posits that pretonic **e *ē* shift to **a *ā* when next to a rhotic, the semivowel **w* or its vocalic equivalent **u*, and any (labio)velar:

PIE **h₁erk^wós* → **erk^wós* → **ark^wós* → AB. *arvos*
 PIE **h₃lh₁rós* → **lērós* → **lārós* → AB. *lāros*
 PIE **kh₁snós* → **kesnós* → **kasnós* → AB. *kaznos*

When preceding **n* before another velar, the allophonic velarity of the nasal also triggered the same shift:

$$\text{PIE } *h_1ng^wnís \rightarrow *eng^wnís \rightarrow *ang^wnís \rightarrow \text{AB. } amvnis$$

It is likely this change originally also affected the augment for roots starting with the consonants mentioned above, but we find no trace of this in inscriptions, and it was probably analogised away later.

Due to the environment this change is conditioned by, several historical linguists have pointed out the noteworthy similarity to the phenomenon known as RUKI, which was long held to only affect satem languages. However, post-Proto-Germanic developments related to vowel lowering in RUKI-like environments have pointed towards the isogloss being shared with at least one centum language, too (see Prescott (2004)), so it is not unthinkable that the Carite shift may be explained in the same vein.

Unusually, some words show the effects of Davide's Law outside of these conditions. One of these conditions is after initial **s*, which will actually be explained shortly; the others are more opaque. The effect again seems to be limited to pretonic **e* **ē*, but the range of adjacent consonants triggering it seems to be larger. Some Caritologists have suggested that dialectally, Davide's Law also affected any pretonic **e* **ē* next to voiced obstruents, citing the glottalic theory as a possible additional cause. Regardless, the conditions are not fully understood and we only posit the following:

$$\text{PIE } *h_1ed^hléh_2 \rightarrow *ed^hlá \rightarrow *ad^hlá \rightarrow \text{AB. } adlā$$

Superficially, the fact Carite exhibits “too many” a-vocalisms is noteworthy similar to an identical problem in Latin. However, the conditions are entirely different. For more information on the Italic colouring of **o* to **a*, please refer to sources such as Vine (2011) and de Vaan (2008).

0.2.12 Development of **h*

Word-initial laryngeal voicing of **s* enables the dating of another change: its word-initial, prevocalic debuccalisation:

$$\text{PIE } *sok^wyós = *sok^wyós \rightarrow *hok^wyós \rightarrow \text{AB. } hovjos$$

Greek also took part in the debuccalisation of **s*, although it was significantly more widespread, also taking place intervocally and in some complex clusters. Compare the following:

- Proto-Indo-European **supnós* > °HUPNOS°, Proto-Celtic **sownos*, Ancient Greek ὕπνος, Latin *somnus*, Proto-Germanic **swefnaz*;
- Proto-Indo-European **swekrúh₂* > °SOCRUSAUNT°, Proto-Celtic **swekrū*, Ancient Greek ἐκυρά, Latin *socrus*, Proto-Germanic **swegrū*.

As shown above, original **sw-* kept the sibilant as is; the labial would later possibly coalesce with the following vowel.

Another change, presumably happening concurrently, was the debuccalisation of word-initial prevocalic **g^h*:

$$\text{PIE } *ǵ^hérm̥p \rightarrow *g^hérmun \rightarrow *hérmun \rightarrow \text{AB. } hermun$$

In Latin, we find «h» for original **g^h* but in a far more widespread environment. Compare the following:

- Proto-Indo-European $*\acute{g}^h h_2 \acute{e}ns > {}^\circ\text{GANSGOOSE}^\circ$, Proto-Celtic $*\acute{g}ansis$, Ancient Greek $\chi\acute{\eta}ν$, Latin *ansēr* (through $*\acute{h}ansēr$), Proto-Germanic $*\acute{g}ans$;
- Proto-Indo-European $*w\acute{e}\acute{g}^h eti > {}^\circ\text{VEHOBRING}^\circ$, Ancient Greek $\acute{\epsilon}\chi\omega$, Latin *vehō*, Proto-Germanic $*weganq$.

In a handful of words, we find the effects of Davide’s Law on words that etymologically started with $*s$. It is likely that the word-initial prevocalic merger of $*s$ and $*g^h$, where the latter triggered the change, resulted in these hypercorrections.

PRE-AB. $*sh_1syós \rightarrow *hesyós \rightarrow *hasyós \rightarrow$ AB. *hazjos*

0.2.13 Dental assibilation

Around this time, dental plosives following a (labio)velar plosive assibilated when not followed by another consonant.

PIE	$*h_3ektéh_3$	$\rightarrow$	$*októ$	$\rightarrow$	$*oksó$	$\rightarrow$	AB.	<i>ogzū</i>
PRE-AB.	$*d^h g^h emelos$	$\rightarrow$	$*g^h d^h emelos$	$\rightarrow$	$*g^h zemelos$	$\rightarrow$	AB.	<i>gzemelos</i>
PIE	$*wlik^wtóm$	$=$	$*wlik^wtóm$	$\rightarrow$	$*wlik^wsóm$	$\rightarrow$	AB.	<i>wlizmom</i>

This process was unique to Carite and can not be found in other early western Indo-European languages.

0.2.14 Aspiration loss

The three-way stop system collapsed after dental assibilation occurred. First, we find that plain and aspirated voiced stops neutralize after a nasal:

PIE $*wénd^h eh_2 \rightarrow *wénd^h ā \rightarrow *wéndā \rightarrow$ AB. *wendā*

It was long assumed that an identical change occurred in Italic; however, recent evidence suggests that this must be a post-Italic development, as Umbrian lacks it. As such, even though Latin has an identical development, we must consider these to be independent (cf. Stuart-Smith (2004)).

The three-way contrast system in plosives only took place after the aforementioned post-nasal neutralisation. The voiced aspirates, being actually breathy voiced, merged into the tenues. A glottalic interpretation is that in these early Carite stages voicing was a creaky or glottalised feature (explaining laryngeal voicing of word-initial obstruents), and that breathy segments had more in common acoustically with voiceless tenues. Alternatively, we posit that they simply devoiced first and only later lost their aspiration. Regardless, the internal history of this change is opaque, and we only posit:

PIE	$*d^h ub^h nós$	$=$	$*d^h ub^h nós$	$\rightarrow$	$*tupnós$	$\rightarrow$	AB.	<i>tubnos</i>
PIE	$*h_1 réwd^h os$	$\rightarrow$	$*réwd^h os$	$\rightarrow$	$*réwtos$	$\rightarrow$	AB.	<i>rȳtos</i>
PIE	$*\acute{u}g^h wetós$	$\rightarrow$	$*ag^h watós$	$\rightarrow$	$*akwatós$	$\rightarrow$	AB.	<i>akōdos</i>
PIE	$*g^w hermós$	$\rightarrow$	$*g^w harmós$	$\rightarrow$	$*k^w armós$	$\rightarrow$	AB.	<i>farmos</i>

Notably, this change did not affect word-initial $*h$ derived from older $*g^h$, as it had already merged with the reflex of initial $*s$, but did affect all internal instances of $*g^h$ —even those that were preserved as

a result of prefixation. If the environment in which Davide's Law was effective did indeed sporadically include voiced stops, then the collapse of the system probably postdates it. Likewise, the collapse must follow the assibilation described above, as the cluster $*g^h d^h$ yielded $*gz$ (through $*g^h z$), not $**ks$ (through $**kt$).

The outcome of the original three-way contrast system in other languages is diverse. Compare the following cognates:

- Proto-Indo-European $*h_3 orb^h os$ > °ORPHANOS°, Proto-Celtic $*orbos$, Ancient Greek ὀρφανός, Latin *orbus*, Proto-Germanic $*arbaz$;
- Proto-Indo-European $*d^h uréh_2$ > °DOORTURA°, Proto-Celtic $*dworā$, Ancient Greek θύρα, Latin *forum* (through $*porum$), Proto-Germanic $*durō$;
- Proto-Indo-European $*h_3 méyǵ^h eti$ > °MIIKOO° Ancient Greek ομεῖχω, Latin *meiō* (through $*meiχō$), Proto-Germanic $*mīganq$; Proto-Indo-European $*ség^h os$ > °SEGOSPOWER°, Proto-Celtic $*segos$, Proto-Germanic $*segaz$;
- Proto-Indo-European $*snīg^h s$ > °SNIFI° (through $*snik^w i$), Proto-Celtic $*snig^w(y)os$, Ancient Greek νίφα (through $*nik^w a$), Latin *nix* (with oblique *niv-* through $*niy^w-$), Proto-Germanic $*snaiwaz$ (through $*snaigwaz$).

The way Celtic handles the voiced aspirates is relatively straightforward, as it merged voiced aspirates into the regular voiced series. The only exception is $*g^w$, which deaspirated only after $*g^w$ had shifted to $*b$. In Greek, the aspirates simply devoiced; this may be an isogloss shared with Carite, which would later lose their aspiration. In Italic, we find word-initial devoicing of the aspirates, after which all aspirates became fricatives. In Latin times, these later shifted further — for exact details, one may consult Stuart-Smith (2004), although the examples listed above already give some clues. In Germanic, the voiced aspirates played a pivotal role in what is referred to as Grimm's Law. The three-way contrast system remained, although a chain shift took place that caused the fricativisation of voiceless stops, the devoicing of voiced stops, and the deaspiration of aspirates. This can be conveniently conveyed as $*B^h > *B > *P > *F$. For more information and examples, please consult Ringe (2009).

0.2.15 Labiovelar developments

Long-distance assimilation of labial $*p$ into a following $*k^w$ happened around this period. It is unknown whether this change predated or postdated the collapse of the aspiration-based system, since there are no suitable etymologies with original $*b^h$ and $*g^w$. Examples are few but include the following:

Italo-Celtic individually underwent a similar assimilation, the difference being that Carite requires the second labiovelar to be prevocalic, whereas Italo-Celtic does not. Compare the following:

- Proto-Indo-European $*pénk^w e$ > °5°, Proto-Celtic $*k^w enk^w e$, Ancient Greek πέντε, Latin *quinque*, Proto-Germanic $*fimfe$;
- Proto-Indo-European $*pok^w téh_2$ > °COCTUSSWEAT°; compare to Proto-Celtic $*k^w oxtos$ (through $*k^w oktos$), Latin *coctus* (through *quoctus*).

The development of Proto-Germanic $*fimfe$ seems like it fits the picture, but is actually an irregular assimilation going the other way around, with $*k^w$ assimilating into the preceding $*p$ and a shift to $*f$ through Grimm's Law. On the preconsonantal delabialisation in the latter example, as well as the Carite outcome of $*k^w$ s, see below. The Carite ordinal °5° appears to defy the prevocalic requirement of the shift, but this is easily explained as analogy with the cardinal.

It was roughly at this time that the more lenis labiovelar plosives $*k^w$ $*g^w$ lost their velar plosion, but retained the lower frequency timbre of velarisation by labiodentalising instead of merely shifting to labials:

PIE	$*neg^w hrós$	→	$*nak^w rós$	→	$*nafrós$	→	AB.	navros
PIE	$*ug^w rós$	=	$*ug^w rós$	→	$*uvrós$	→	AB.	uvros

The development of labiovelars into labials (rather than labiodentals) is seen in some of Carite's sister branches. Celtic, for example, merges $*g^w$ into $*b$ with $*g^{wh}$ taking its place. In Greek, labiovelars merged into labial or dental stops depending on their environment; the exact outcome also depends on the dialect. Latin retained $*k^w$ as «qu» (except in cases where it was later unrounded), while $*g^w$ merged into $*w$ «v» when not postnasal. Some other Italic languages shifted them to labial plosives. Germanic retained labialisation, but the series had been subject to Grimm's Law, yielding $*hw$ $*kw$ $*gw$. Compare the following cognates:

- Proto-Indo-European $*linék^w ti$ > °LEYKWO° (through $*linfó$) > Proto-Celtic $*link^w eti$, Ancient Greek λιμπάνω, Latin *linquō*; Proto-Indo-European $*h_2ék^w eh_2$ > °AQUAWATER°, Latin *aquā*, Proto-Germanic $*ahwō$;
- Proto-Indo-European $*g^w ih_3 wós$ > °VIVUS°, Proto-Celtic $*biwos$, Latin *vīvus*, Proto-Germanic $*kwikwaz$; Proto-Indo-European $*h_1 rég^w os$ > °TWILIGHTDUSK°, Ancient Greek ἔρεβος, Proto-Germanic $*rekwaz$.

The intervocalic labiovelar in Proto-Germanic $*kwikwaz$ is a development unique to Germanic referred to as Cowgill's Law; for more information, please refer to Ringe (2009).

It is worth noting that Carite, unlike all other western centum languages – Celtic (before $*y$, $*t$, $*s$ and $*n$), Greek (before $*y$), Latin (before all consonants) and Germanic (before $*y$, $*r$ $*t$) – preserved labialisation in all cases (with the obvious exception of the boukolos rule). Compare the words for “night”:

- Proto-Indo-European $*nók^w ts$ > °NUFT° (through $*nofsī$), Proto-Celtic $*noxtV-$, Ancient Greek νόξ (through $nók^w ts$ > $núkts$ with Cowgill's Law), Latin *nox* (through *nocts*), Proto-Germanic $*nahts$.

Please do note that the conditions of delabialisation in the other branches mentioned above are simplifications. For further information, consult the relevant sources.

0.2.16 Diphthong collapse

When any vowel was followed by $*i$ $*u$, the sequence collapsed into a diphthong, with $*i$ $*u$ surfacing as the semivowels $*y$ $*w$. If they were formerly stressed, the stress shifted to the preceding vowel:

PIE	$*kéh_2 ikos$	→	$*káikos$	→	$*káykos$	→	AB.	kikos
PRE-AB.	$*keh_2 ulós$	→	$*kaulós$	→	$*kawlós$	→	AB.	kōlos

This widespread change primarily resolved hiatus originating from $*VHV$ environments. Very early on, the homorganic sequence $*eye$ coalesced into a long vowel:

PIE	$*tréyes$	=	$*tréyes$	→	$*trés$	→	AB.	trīs
-----	-----------	---	-----------	---	---------	---	-----	------

At some point between the coalescence of **eye* and all further monophthongisation (as will be discussed below), semivowel dissimilation took place. In brief, **w* and **y* shifted to **b* and **l*, respectively, when near or next to another instance of the same vowel or its vocalic equivalent. More precisely, **w* shifted to **b* before **u* **ū* or before a sequence consisting of a vowel, optionally a resonant, and **w*, while **y* shifted to **l* before **i* **ī* or before a sequence consisting of a vowel, optionally a resonant, and **y*:

PIE	<i>*h₁néwntos</i>	→	<i>*néwuntos</i>	→	<i>*nébuntos</i>	→	AB.	nebuntos
PIE	<i>*wiweros</i>	=	<i>*wiweros</i>	→	<i>*biweros</i>	→	AB.	biweros
PIE	<i>*yoynis</i>	=	<i>*yoynis</i>	→	<i>*loynis</i>	→	AB.	lōnis

We know this change follows the coalescence of **eye*, as the sequence **eyey* surfaces as **-ηῖ* (**-ēj*) and not ***ελη* (**-elē*). This dissimilation did not take place where the vocalic equivalent preceded its semivowel equivalent: we find °TREEKNOWER° rather than ***δρυβίστρις* (***drubīstris*).

Short diphthongs merged into long vowels. The sequences **we* **wa* **wo* collapsed too, unless the result would be shortened by Osthoff's Law.

PIE	<i>*wáy</i>	→	<i>*wáj</i>	→	<i>*ój</i>	→	AB.	ūj
PIE	<i>*wésmṇ</i>	→	<i>*wésmun</i>	→	<i>**y:smun</i>	→	AB.	ýsmun
PRE-AB.	<i>*swóyos</i>	→	<i>*swójos</i>	→	<i>*sūjos</i>	→	AB.	sūjos
PRE-AB.	<i>*h₂éwsos</i>	→	<i>*áwsos</i>	→	<i>*ósos</i>	→	AB.	ūsos
PIE	<i>*yéwgmṇ</i>	→	<i>*jéwgmun</i>	→	<i>*j"y:gmun</i>	→	AB.	jýgmun
PIE	<i>*kowh₁ros</i>	→	<i>*kowros</i>	→	<i>*kūros</i>	→	AB.	kūros
PIE	<i>*pṛh₂i</i>	→	<i>*praj</i>	→	<i>*prē</i>	→	AB.	prē
PRE-AB.	<i>*léymō</i>	→	<i>*léjmō</i>	→	<i>*līmō</i>	→	AB.	līmō
PIE	<i>*h_xóynos</i>	→	<i>*ójnos</i>	→	<i>**ø:nos</i>	→	AB.	ōnos

This caused the original Indo-European ablaut patterns to become very opaque, leading to the loss of productive ablaut.

0.2.17 Other minor changes

A few other consonant changes date to roughly this period without an easy way to precisely date them relative to other Abean developments of this time. Several clusters simplified word-initially:

PIE	<i>*tpérsneh₂</i>	→	<i>*tpérsnā</i>	→	<i>*pérsnā</i>	→	AB.	pernā
PIE	<i>*kséwtrom</i>	→	<i>*ks"y:trom</i>	→	<i>*s"y:trom</i>	→	AB.	sýtrom

In a single occurrence, word-initial **sf-* (from original **sk^w-*) underwent fortition to **sp-*:

As this appears to be the only case where said environment takes place, it is unknown whether this change is regular.

Likewise, initial **dl* dissimilates to **gl*. This is the only attested word:

PIE	<i>*dlh₁g^hós</i>	→	<i>*dlākós</i>	→	<i>*glākós</i>	→	AB.	glāgos
-----	--	---	----------------	---	----------------	---	-----	--------

It is unknown if the same would happen to initial **tl-* as Abean does not appear to continue any words with it.

The initial cluster **pst* yielded Carite **sp*, possibly through an intermediate **spt*:

PRE-AB. *sptényos → *spténjos → *spénjos → AB. spenjos

Word-initially, **m* was fortited to **b* before any liquid:

PIE *m_{rg}^htós → *mriksós → *briksós → AB. brigzos

This change is shared with Greek, Latin and Germanic, while Celtic appears to lack it. Compare the following:

- Proto-Indo-European **mrég^hm̥* > °BRAGNAZBRAIN°, Ancient Greek βρέχμα, Proto-Germanic **bragnaz*;
- Proto-Indo-European **mrég^hus* > °BRIGWIS°, Ancient Greek βραχύς, Latin *brevis*;
- Proto-Indo-European **m̥lh₂tis* > Proto-Celtic **mlātis*.

Curiously, prevocalic **fs* and **ms* both surface as **sm*:

PIE *nig^wtós → *nifsós → *nismós → AB. nizmos
 PIE *h₁ómsos → *ómsos → *ósmos → AB. osmos

It is likely the cluster **fs* first dissimilated and merged into **ms* before metathesis. Between two sonorants, **s* was deleted:

PIE *pénk^wtos → *pénsmos → *pénmos → AB. pemmos

Word-finally, **d* rhotacised into **r*, provided it was preceded by a vowel:

PIE *h₂éd → *ád → *ár → AB. ar

Somewhere around this time, the short high vowels **i* **u* turned into glides when unstressed and preceding another vowel. This did not take place when following any cluster.

Following the reduction of these unstressed high vowels, dentals palatalised:

PIE *tyeg^wnós → *tjavnós → *savnós → AB. savnos
 PIE *bod^hyós → *botjós → *bossós → AB. bozzos
 PIE *dyéws → *dj^wy:s → *z^wy:s → AB. zȳs
 PIE *pedyós → *padjós → *pazzós → AB. pazzos

This assibilation of dentals resembles Greek, but it is by no means as widespread as in there. Refer to Sihler (1995) for the major palatalisation of most Proto-Greek consonants.

Stressed **e* **o* were raised:

PIE *méh₁ → *mé → *mí → AB. mī
 PRE-AB. *k^wetór → *fatór → *fatúr → AB. fadūr

0.2.18 Nasal surface filter

A surface filter of nasal assimilation applying across Carite history is also dated to have started here:

PIE	*h ₂ éngʷhis	→	*ánvis	→	*ámvis	→	AB.	amvis
PRE-AB.	*demspótis	=	*demspótis	→	*denspótis	→	AB.	denzbotis
PIE	*h ₂ émǵʰi	→	*ámgi	→	*ángi	→	AB.	angi

Exceptionally, *m did not assimilate into *n before *n, which was retained as the sequence *mn instead.

0.2.19 Carite Verner’s Law

The change that is taken to define Carite as a fully independent language in its own right is the **Carite Verner’s Law**, a structural parallel of Verner’s Law in Germanic. Onsets of stressed, non-initial Carite syllables were voiced, and when distinctive positional accent was lost to fixed word-initial accent, the voicing phonemicised completely:

PIE	*ṇḍṛketós	→	*adirkatós	→	*adirkadós	→	AB.	adirkados
-----	-----------	---	------------	---	------------	---	-----	-----------

The voicing is likely to have initially affected only the onset of that stressed syllable, but voicing assimilation rules for clusters spread voicing to the whole cluster. Despite the name and similar effect – that is, the voicing of segments based on now-lost accent – this law significantly differed from its Germanic analogue. In Germanic, clusters were automatically disqualified from being affected by the law, and the requirement was that the preceding syllable nucleus be unstressed. In Carite, clusters benefited significantly from the effects of this law, and it only affected the onset of what was formerly a stressed syllable as long as it was non-initial; as such, word-final coda voicing effects as in Germanic’s *-az suffix (from *-os) are nowhere to be found in Carite.

While Carite and Germanic are the most well-known examples of Indo-European branches losing phonemic stress or pitch accent only after it had functioned as conditioning for other changes, these are by no means the only ones. Other stress-based Carite developments mentioned before are Davide’s Law and the stress-based raising of Proto-Indo-European *ē *ō. Outside of Carite, we find Dybo’s Law – the pretonic shortening of vowels in some environments – which most certainly affected Celtic and quite possibly also Latin and Germanic; for more information, please refer to Matasović (2012).

PIE	*sem-	→	PROTO-HELLENIC	*hen-s	→	ATTIC	εἷς <i>heís</i>	‘one’

(ὥλινᾱ) (wlinā) /wli:na/ NOUN. Q-STEM *atarum*
 SENSES wool

ETYM From PIE $^{*}(h_2)w\acute{h}_1neh_2$, from $^{*}(h_2)welh_1-$ (?). The actual reconstruction of the root differs between authors, with the middle laryngeal being reconstructed both as $^{*}h_1$ and $^{*}h_2$. While this is irrelevant to the outcome in Carite, $^{*}h_2$ seems more likely due to the Doric variant λᾱνος (*lānos*), if not a hyperdorism. More prevalent is the reconstruction with with an initial $^{*}h_2-$. This laryngeal is reconstructed on the basis of the initial *h*- in Hittite. Matasović (2009) ascribes this to metathesis however, as neither Greek form shows any trace of the expected word-initial α (*a*-). While Beekes (2010) says the laryngeal might have been there originally, it must have vanished disappeared early in Greek history, possibly through dissimilation. The presence of the laryngeal would not affect the Carite outcome as Engels' law would require $^{*}h_2w-$ to be followed by a vowel. As pointed out by Kroonen (2013), the Germanic reflex requires a suffix-stressed form which slightly deviates from the others; however, Ringe (2009) departs from a radically stressed form instead.

-ισκος (-iskos) /-iskos/ UNDEFINED. Q-STEM *atarum*

 ETYM From PIE **h₂énkos*, from **h₂enk-* (?).

αγρος (agros) /agros/ NOUN. Q-STEM *atarum*
 SENSES field, farm
 ETYM From PIE **h₂eǵros* (), from **h₂eǵ-* (?).

αγῖνος (agīnos) /agi:nos/ NOUN. Q-STEM *atarum*
 SENSES hedgehog

ETYM From Pre-Ab. **h₁eg^hi_xnos*, from PIE **h₁ég^his*. Beekes (2010) reconstructs the Proto-Germanic etymon with **-ī-* although Kroonen (2013) disagrees. While the **l~*n* alteration may date back to Proto-Indo-European times, it is more likely we are dealing with two separate derivations, a view which is supported by the difference in length. While the Germanic form may be traced back to the diminutive suffix **-ilaz*, either Hoffmann's suffix **-h_xn-* or the derivational **-ih_xnos* may be identified in the Graeco-Armeno-Carite derivation. The presence of an o-grade in Armenian as well as its classification as an a-stem points towards an independent Armenian derivation, while it is impossible to point out if the Graeco-Carite derivations, which are formally identical, are independent or areal innovations. While the association between hedgehogs and snakes appears to be common and a linguistic analysis of hedgehog as “snake-eater” checks out zoologically, an actual derivation only makes sense phonologically in Greek as its word for snake, Ancient Greek ἔχις, would be the only pure reflex of a hypothetical Proto-Indo-European **h₁ég^his*, being displaced by **h₃ég^{wh}is* in other branches. Any corruption of reflexes of the latter or of the lexeme for hedgehog in descendants must thus be secondary.

Αγῶνος (Agūnos) /agu:nos/ NOUN. Q-STEM *atarum*
 SENSES pagan god of archery and solar chariot

ETYM From PIE **h₁ekwónos*. In the Carite pantheon, this god continues one of the divine horse twins alongside °HORSETWIN2°, more specifically the young warrior, and his depiction varies from a young man riding a horse to a centaur. Functional equivalents include the Ancient Greek Διόσκοροι. Onomastically, this deity is a derivation of the common word for horse, Proto-Indo-European **h₁ékwos* (cf. °EKWOS°).

αδῖρκαδος (adirkados) /adirkados/ UNDEFINED. Q-STEM *atarum*
 SENSES hidden

ETYM From PIE **ṛdṛketós*, from **derk-* (?).

αδλᾶ (adlā) /adla:/ NOUN. Q-STEM *atarum*
 SENSES danewort, dwarf elder

ETYM From PIE **h₁ed^hlē₂*, from **h₁ed^h-* (?). Probably of substrate origin. The meaning of “danewort” as opposed to other trees, as is the case in e.g. Slavic, is restricted to Italo-Carite. The Gaulish Gaulish *odocos* is often connected, but Delamarre (2003) connects it to Proto-Indo-European **h₃ed-* “to smell” instead. The connection to Ancient Greek ἐλάτη as posited by Friedrich (1970) must be discarded.

αδος (ados) /ados/ NOUN. Q-STEM *atarum*
 SENSES emmer

ETYM From PIE **h₂édos*, from **h₂ed-* (?).

αθνος (avnos) /avnos/ NOUN. Q-STEM *atarum*
 SENSES lamb

ETYM From PIE **h₂eg^wnós*. The labiovelar is sometimes reconstructed as aspirated to account for the Celtic reflex; however, this would be incompatible with the Slavic and Greek reflexes. See Matasović (2009) for a more in-depth explanation on how Proto-Celtic **owignos* may have come into being.

Αθῖος (Avjos) /avjos/ UNDEFINED. Q-STEM *atarum*
 SENSES Abean

ETYM From Pre-Ab. **h₂ek^wγός*, from PIE **h₂ék^weh₂*.

ακινος (akinos) /akinos/ NOUN. Q-STEM *atarum*
 SENSES grape

ETYM From PIE **h₂ekinos* (), from **h₂ek-* (?).

- ακίρνᾱ (akirnā)** /akirna:/ NOUN. Q-STEM *atarum*
 SENSES maple
 ETYM From PIE **akṛnéh₂*. A tree name of North-Western substrate origin.

 SENSES servant, slave
 ETYM From PIE **h₂ṃb̑h₂ik̑^wolh₁ós* (), from **k̑^welh₁-* (?).
- αμθις (amvis)** /amvis/ NOUN. Q-STEM *atarum*
 SENSES snake
 ETYM From PIE **h₂éng̑^whis*.

Ἀμῶνις (Amvnis) /amvnis/ NOUN. Q-STEM *atarum*
 SENSES pagan god of fire

ETYM From PIE **h₁ngʷnís*, from **h₁engʷ-* (?).

ἄνδιος (andios) /andios/ NOUN. Q-STEM *atarum*
 SENSES front, forehead

ETYM From PIE **h₂entíos*, from **h₂ent-* (?). The form **h₂entíos* is labelled as Post-Proto-Indo-European by Ringe (2009). Despite not having had any contact with the Germanic people until the time of the Visigoths, we may find the same accentuation in Greek, which is likely a development shared by Carite.

ἄνδος (andos) /andos/ NOUN. Q-STEM *atarum*
 SENSES flower

ETYM From PIE **h₂éndʰos*, from **h₂endʰ-* (?).

ἀνεμος (anemos) /anemos/ NOUN. Q-STEM *atarum*
 SENSES breath

ETYM From PIE **h₂énh₁mos* (), from **h₂enh₁-* (?).

ἀνεμῦν (anemun) /anemun/ NOUN. Q-STEM *atarum*
 SENSES soul

ETYM From PIE **h₂énh₁mḡ*, from **h₂enh₁-* (?).

ἄνρως (anros) /anros/ NOUN. Q-STEM *atarum*
 SENSES man

ETYM From Pre-Ab. **h₂nrós*, from PIE **h₂nér*. From the original paradigm **h₂nēr* (acc **h₂nérm*, gen **h₂nrós*), Carite appears to have thematicised the genitive stem whereas Celtic generalised the accusative stem.

ἀντι (anti) /anti/ UNDEFINED. Q-STEM *atarum*
 SENSES againstℓ+DAT, thanℓ+DAT, because ofℓ+DAT

ETYM From PIE **h₂énti*.

ἄξω (axō) /akso:/ NOUN. Q-STEM *atarum*
 SENSES axle

ETYM From PIE **h₂éksō*, from **h₂eks-* (?).

ἄπο (apo) /apo/ UNDEFINED. Q-STEM *atarum*
 SENSES fromℓ+DAT, sinceℓ+DAT of time, afterℓ+DAT of time

ETYM From PIE **h₂epo*, from **h₂ed-* (?).

ἄρ (ar) /ar/ UNDEFINED. Q-STEM *atarum*
 SENSES toℓ+ACC, atℓ+DAT

ETYM From PIE **h₂éd*.

ἄργινδομ (argindom) /argindom/ NOUN. Q-STEM *atarum*
 SENSES silver

ETYM From PIE **h₂erǵntóm*, from **h₂erǵ-* (?).

ἄργρος (argros) /argros/ UNDEFINED. Q-STEM *atarum*
 SENSES bright

ETYM From PIE **h₂ǵrós*, from **h₂erǵ-* (?).

αρθος (arvos) /arvos/ NOUN. Q-STEM *atarum*

SENSES religious chant

ETYM From PIE **h₁erkʷós*, from **h₁erkʷ-* (?). While both Mallory (2006) and Martirosyan (2010) include a Celtic cognate in Old Irish *erc* (“heaven”), the word is noteworthy missing from Matasović (2009). Martirosyan (2010) also mentions the Irish word for heaven being a reflex of the god of thunder, for which see °PERKUNAS°.

αρκω (arkō) /arko:/ NOUN. Q-STEM *atarum*

SENSES chest&anatomy

ETYM From PIE **h₂érkō*, from **h₂erk-* (?).

αρξος (arxos) /arksos/ NOUN. Q-STEM *atarum*

SENSES bear

ETYM From PIE **h₂értkos*. The numerous alterations in the cognates can be ascribed to tabooistic distortion.

αροτρομ (arotrom) /arotrom/ NOUN. Q-STEM *atarum*

SENSES plough, ard

ETYM From PIE **h₂érh₃trom*, from **h₂erh₃-* (?).

αρτρομ (artrom) /artrom/ NOUN. Q-STEM *atarum*

SENSES sinew, tendon

ETYM From PIE **h₂érdʰrom*, from **h₂er-* (?).

αρφος (arfos) /arfos/ NOUN. Q-STEM *atarum*

SENSES bow

ETYM From PIE **h₂érkʷós*. de Vaan (2008) compares the reflexes to Ancient Greek ἄρκευθος and Proto-Slavic **orkŷta* and assumes a substrate word. However, the presence of the labialisation in Germano-Celtic while it is missing from Greek is problematic.

αρῖος (arjos) /arjos/ NOUN. Q-STEM *atarum*

SENSES believer in the Carite pantheon

ETYM From PIE **h₂eryós* ().

ασδος (asdos) /azdos/ NOUN. Q-STEM *atarum*

SENSES criminal

ETYM From PIE **ǵd̥tós*, from **med-* (?). A word of dubious origin. The most popular etymology is a derivation of Proto-Indo-European **med-*, shifting in meaning from “he who is measured” to “he who is judged” and finally to “criminal”.

ασφαδος (asfados) /asfados/ UNDEFINED. Q-STEM *atarum*

SENSES taboo, unacceptable, forbidden

ETYM From PIE **ǵskʷetós*, from **sekʷ-* (?).

αφα̃ (afā) /afa:/ NOUN. Q-STEM *atarum*

SENSES water

ETYM From PIE **h₂ékʷeh₂*. The Proto-Indo-European formation is most likely Post-Proto-Indo-European, being restricted to Italo-Germano-Carite. Kroonen (2013) suggests for a formal variant of Proto-Indo-European **h₂eP-* over a loan from a non-Indo-European language. Kilday (2015) makes an interesting case for the root **h₁eh₁kʷ-*, whence the root-accent zero grade formation **h₁ǵ₁kʷeh₂*. This formation is incompatible with the Carite reflex, however. For more information, please consult the source.

αψ (aps) /aps/ UNDEFINED. Q-STEM *atarum*
 SENSES again, in return
 ETYM From PIE **h₂éps*.

αἴερι (ajeri) /ajeri/ UNDEFINED. Q-STEM *atarum*
 SENSES tomorrow
 ETYM From PIE **h₂éyeri*.

αῖος (ajos) /ajos/ NOUN. Q-STEM *atarum*
 SENSES metal
 ETYM From PIE **h₂éyos*.

αῦος (awos) /awos/ NOUN. Q-STEM *atarum*
 SENSES grandfather
 ETYM From PIE **h₂éwh₂os* ().

βακτρομ (baktrom) /baktrom/ NOUN. Q-STEM *atarum*
 SENSES staff, scepter, rod
 ETYM From PIE **báktrom*, from **bak-* (?).

βαρβαρος (barbaros) /barbaros/ UNDEFINED. Q-STEM *atarum*
 SENSES foreign
 ETYM From PIE **bárbaros*, from **barbar-* (?).

βιῦρος (biweros) /biweros/ NOUN. Q-STEM *atarum*
 SENSES squirrel

ETYM From PIE **wiweros*, from **wer-* (?). The Latin outcome is irregular and may be through folk etymology, possibly through analogy with Latin *vīvus*? Balto-Slavic cognates are mentioned in multiple sources but seemingly missing from Derksen (2008); they are mentioned in Derksen (2015), however. Kroonen (2013) attempts to connect the seemingly unrelated Germanic reflex by including a laryngeal, yielding the root **h₂wer-*. However, this would also surface in the reduplications as **h₂ey-*, **h₂wi-*, **h₂i-* and even **h₂oy-*, making this a very ad hoc solution. His explanation, being that the daughters independently restored the reduplication after the loss of laryngeals, is unconvincing. As suggested by Mallory (2006) among others, by analysing the Germanic formation as a compound of the word for “oak”, Proto-Germanic **aiks*, and the Proto-Indo-European root **wer-* reconstructed by the other scholars, we may solve the puzzle without any new issues emerging.

βορῦς (borüs) /boru:s/ UNDEFINED. Q-STEM *atarum*
 SENSES boundary, edge
 ETYM From PIE **wórwos*, from **werw-* (?).

βοσζος (boszos) /bozzos/ UNDEFINED. Q-STEM *atarum*
 SENSES yellow
 ETYM From PIE **bod^hyós*.

βρεκμυν (brekmun) /brekmun/ NOUN. Q-STEM *atarum*
 SENSES brain
 ETYM From PIE **mrég^hm̥n̥*, from **mreg^h-* (?).

βριγζος (brigzos) /brigzos/ UNDEFINED. Q-STEM *atarum*
 SENSES drenched
 ETYM From PIE **mr̥g^htós*, from **merg^h-* (?).

βυλφος (bulfos) /bulfos/ NOUN. Q-STEM *atarum*
 SENSES wolf

ETYM From PIE **w_lk^wos*. This word appears to have been reshaped significantly in the different branches, presumably due to taboo. The Balto-Slavic mobile accent contrasts with what we find in other branches and may be due to analogy with the feminine form.

γε (ge) /ge/ UNDEFINED. Q-STEM *atarum*
 SENSES indeed, thus, therefore

ETYM From PIE **ǵe*.

γενεμυν (genemun) /genemun/ NOUN. Q-STEM *atarum*
 SENSES legacy

ETYM From PIE **ǵénh₁m₂*, from **ǵénh₁-* (?).

γενετρί (genetri) /genetri:/ NOUN. Q-STEM *atarum*
 SENSES mother

ETYM From PIE **ǵénh₁trih₂*, from **ǵénh₁-* (?).

γενος (genos) /genos/ NOUN. Q-STEM *atarum*
 SENSES race, lineage

ETYM From PIE **ǵénh₁os*, from **ǵénh₁-* (?).

γζεμελος (gzemelos) /gzemelos/ UNDEFINED. Q-STEM *atarum*
 SENSES low

ETYM From Pre-Ab. **d^hǵ^hemelos*, from PIE **d^héǵ^hōm*, from **d^héǵ^h-* (?).

γζεσι (gzesi) /gzesi/ UNDEFINED. Q-STEM *atarum*
 SENSES yesterday

ETYM From PIE **d^hǵ^hési*, from **d^heǵ^h-* (?).

γλοῦς (glojūs) /gloju:s/ UNDEFINED. Q-STEM *atarum*
 SENSES clay

ETYM From PIE **gloywos*, from **gley-* (?). Derksen (2008) and de Vaan (2008) prefer to reconstruct **g₁leh₁y-* as the root, but this would not have a difference in the Carite outcome. Matasović (2009) posits **gleyh_x-* instead, which would require Dybo's law for the Proto-Celtic verb **glināti*. Martirosyan (2010) posits an additional **g₁leh₂-*, which is problematic for multiple reasons. Either way, the exact reconstruction is uncertain. The original suffix of the Greek reflex is uncertain; if **-yos*, it is formally identical to the Germanic reflex instead.

γλᾶγος (glāgos) /gla:gos/ UNDEFINED. Q-STEM *atarum*
 SENSES long

ETYM From PIE **d_lh₁ǵ^hós*.

γλίς (glis) /gli:s/ UNDEFINED. Q-STEM *atarum*
 SENSES dormouse

ETYM From PIE **glh₁ís*.

γνωδος (gnōdos) /gno:dos/ UNDEFINED. Q-STEM *atarum*
 SENSES known

ETYM From PIE **ǵnh₃tós*, from **ǵneh₃-* (?).

γομβος (gombos) /gombos/ NOUN. Q-STEM *atarum*
 SENSES jaw

ETYM From PIE **ǵómb^hos*, from **ǵemb^h-* (?).

γρᾶνομ (grānom) /gra:nom/ NOUN. Q-STEM *atarum*
SENSES grain

ETYM From PIE **grh₂nóm*, from **gerh₂-* (?).

γυνδομ (gundom) /gundom/ UNDEFINED. Q-STEM *atarum*
SENSES hundred

ETYM From PIE **h₁kmtóm*.

δυῖος (dyjos) /dy:jos/ NOUN. Q-STEM *atarum*
SENSES fear

ETYM From PIE **dwéyos*, from **dwey-* (?).

δαγῶα (dagwā) /dagwa:/ NOUN. Q-STEM *atarum*
SENSES tongue

ETYM From Pre-Ab. **dng^hwéh₂*, from PIE **dng^hwéh₂s*.

δαξιῶος (daxiws) /daksiws/ UNDEFINED. Q-STEM *atarum*
SENSES right, south

ETYM From PIE **deksiwós*, from **dek-* (?).

δεκος (dekos) /dekos/ NOUN. Q-STEM *atarum*
SENSES honour, dignity

ETYM From PIE **dékos*, from **dek-* (?).

δεκυμ (dekum) /dekum/ UNDEFINED. Q-STEM *atarum*
SENSES ten

ETYM From PIE **dékm*.

δεκυντος (dekuntos) /dekuntos/ UNDEFINED. Q-STEM *atarum*
SENSES tenth

ETYM From PIE **dékm̥tos*.

δελετρομ (deletrom) /deletrom/ NOUN. Q-STEM *atarum*
SENSES pick, pickaxe

ETYM From PIE **délh₁trom*, from **delh₁-* (?).

δενσβοτις (densbotis) /denzbotis/ NOUN. Q-STEM *atarum*
SENSES lord

ETYM From Pre-Ab. **demspótis*, from PIE **déms pótis*.

δενσβοτνι (densbotni) /denzbotni/ NOUN. Q-STEM *atarum*
SENSES lady

ETYM From Pre-Ab. **demspótnih₂*, from PIE **déms pótinh₂*.

δεῖϋς (dejūs) /deju:s/ NOUN. Q-STEM *atarum*
SENSES god, deity

ETYM From PIE **deywós* (), from **dyew-* (?).

δη (dē) /de:/ UNDEFINED. Q-STEM *atarum*
SENSES but

ETYM From Pre-Ab. **deh₁*, from PIE **de*.

δογμος (dogmos) /dogmos/ UNDEFINED. Q-STEM *atarum*
SENSES oblique

ETYM From PIE **dh₃g^hmós*.

δοιγῶμ (doigom) /dø:gom/ NOUN. Q-STEM *atarum*
 SENSES symbol, token

ETYM From PIE **doykóm*, from **deyk-* (?).

δομ (dom) /dom/ UNDEFINED. Q-STEM *atarum*
 SENSES while, during

ETYM From Pre-Ab. **dom*, from PIE **de*.

δονς (dons) /dons/ UNDEFINED. Q-STEM *atarum*
 SENSES tooth

ETYM From PIE **h₃dónts*, from **h₃ed-* (?).

δορφομ (dorfom) /dorfom/ NOUN. Q-STEM *atarum*
 SENSES dinner

ETYM From PIE **dórk^wom*.

Δρεκμῶ (Drekmo) /drekmo:/ NOUN. Q-STEM *atarum*
 SENSES pagan god of the underworld

ETYM From PIE **drég^hmō*, from **dreg^h-* (?).

δρομος (dromos) /dromos/ NOUN. Q-STEM *atarum*
 SENSES racetrack

ETYM From PIE **drómos* (), from **drem-* (?).

δᾱϊυρος (dājuros) /da:juros/ NOUN. Q-STEM *atarum*
 SENSES brother-in-law

ETYM From Pre-Ab. **deh₂yurós*, from PIE **deh₂iwér* ().

διμῶ (dīmō) /di:mo:/ NOUN. Q-STEM *atarum*
 SENSES deity

ETYM From PIE **déh₂imō*, from **deh₂y-* (?).

δῠικολμος (dwikolmos) /dwikolmos/ NOUN. Q-STEM *atarum*
 SENSES an ancient instrument

ETYM From Pre-Ab. **dwikolh₂mos*, from PIE **kolh₂m* (), from **kelh₂-* (?).

δῠᾱρος (dwāros) /dwa:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES lasting long

ETYM From PIE **dweh₂rós*, from **dweh₂-* (?).

δῠῦ (dwū) /dwu:/ UNDEFINED. Q-STEM *atarum*
 SENSES two

ETYM From PIE **dwóh₁*.

δῠμᾱ (dūmā) /du:ma:/ UNDEFINED. Q-STEM *atarum*
 SENSES retinue

ETYM From Pre-Ab. **dóme_h*, from PIE **dóm*.

δῠνομ (dūnom) /du:nom/ NOUN. Q-STEM *atarum*
 SENSES gift, present

ETYM From PIE **déh₃nom*, from **deh₃-* (?).

δῠίος (dūjos) /du:jos/ UNDEFINED. Q-STEM *atarum*
 SENSES dumb

ETYM From PIE **dowh₂yos*, from **dweh₂-* (?).

εδονομ (edonom) /edonom/ NOUN. Q-STEM *atarum*
 SENSES food

ETYM From PIE **h₁edonom*, from **h₁ed-* (?).

εκῦς (ekūs) /eku:s/ UNDEFINED. Q-STEM *atarum*
 SENSES horse

ETYM From PIE **h₁ékʷos*.

ελιμβος (elimbos) /elimbos/ NOUN. Q-STEM *atarum*
 SENSES deer

ETYM From PIE **h₁élh^bos* (), from **h₁el-* (?).

ελκος (elkos) /elkos/ NOUN. Q-STEM *atarum*
 SENSES wound, injury

ETYM From PIE **h₁élkos*, from **h₁elk-* (?).

ελνος (elnos) /elnos/ NOUN. Q-STEM *atarum*
 SENSES elk

ETYM From PIE **h₁elnós* (), from **h₁el-* (?).

εν (en) /en/ UNDEFINED. Q-STEM *atarum*
 SENSES inℓ+DAT, insideℓ+DAT, withinℓ+DAT

ETYM From PIE **h₁én*.

ενδερ (ender) /ender/ UNDEFINED. Q-STEM *atarum*
 SENSES betweenℓ+DAT

ETYM From Pre-Ab. **h₁entér*, from PIE **h₁én*.

ενδο (endo) /endo/ UNDEFINED. Q-STEM *atarum*
 SENSES intoℓ+ACC

ETYM From Pre-Ab. **h₁éndo*, from PIE **h₁én*.

ενῖφος (enífos) /eni:fos/ NOUN. Q-STEM *atarum*
 SENSES face

ETYM From PIE **h₁énih₃k^wos* (), from **h₃ek^w-* (?).

εξ (ex) /eks/ UNDEFINED. Q-STEM *atarum*
 SENSES out ofℓ+ACC

ETYM From PIE **ék_s*.

επι (epi) /epi/ UNDEFINED. Q-STEM *atarum*
 SENSES onℓ+DAT, ontoℓ+ACC, for (duration of time)ℓ+ACC

ETYM From PIE **h₁epi*.

ερεμος (eremos) /eremos/ UNDEFINED. Q-STEM *atarum*
 SENSES still, static

ETYM From PIE **h₁érh₁mos*, from **h₁erh₁-* (?).

ερᾶ (erā) /era:/ NOUN. Q-STEM *atarum*
 SENSES earth

ETYM From PIE **h₁ére_{h₂}*, from **h₁er-* (?). While the status of the root is unsure, the Carite forms seem to mirror the Greek one perfectly. Matasović (2009) categorises Welsh *erw* under Proto-Indo-European **h₂erh₃-* instead.

ετι (eti) /eti/ UNDEFINED. Q-STEM *atarum*
 SENSES still, yet, further, also, no more & with negative, no longer & with negative
 ETYM From PIE **h₁éti*, from **h₁et-* (?).

Ζυς (Zys) /zy:s/ UNDEFINED. Q-STEM *atarum*
 SENSES pagan god of the sky and rain
 ETYM From PIE **dyéws*, from **dyew-* (?).

ζωνᾱ (zanā) /zana:/ NOUN. Q-STEM *atarum*
 SENSES blood
 ETYM From Pre-Ab. **h₁sh₂néh₂*, from PIE **h₁ésh₂r*.

ζονᾱ (zonā) /zona:/ NOUN. Q-STEM *atarum*
 SENSES people, men
 ETYM From Pre-Ab. **h₁sh₂onéh₂*, from PIE **h₁ésh₂r*. A formation that appears to be unique to Carite.

ηαβλᾱ (hablā) /habla:/ NOUN. Q-STEM *atarum*
 SENSES head

ETYM From PIE **g^heb^hléh₂*, from **g^heb^h-* (?). The Greek cognate would be formally identical if not for the suffixal vowel of unknown origin. Some sources construct a palatovelar instead, which would be irrelevant to the Carite outcome.

ηαγρομ (hagrom) /hagrom/ NOUN. Q-STEM *atarum*
 SENSES temple, shrine
 ETYM From PIE **sh₂króm*, from **seh₂k-* (?).

ηαζῖος (hazjos) /hazjos/ NOUN. Q-STEM *atarum*
 SENSES rye

ETYM From Pre-Ab. **sh₁syós*, from PIE **(s)h₁syós*, from **(s)h₁es-* (?). The reconstruction **ses(y)ós*, which Mallory (2006) posits, leaves the Celtic vowel unexplained and is thus untenable.

ηαλῶᾱ (halwā) /halwa:/ NOUN. Q-STEM *atarum*
 SENSES vegetable
 ETYM From PIE **g^helh₃wéh₂*, from **g^helh₃-* (?).

ηαμαλος (hamalos) /hamalos/ UNDEFINED. Q-STEM *atarum*
 SENSES equal, level, smooth
 ETYM From PIE **semh₂lós*, from **semh₂-* (?).

ηεβδουμ (hebdum) /hebdum/ UNDEFINED. Q-STEM *atarum*
 SENSES seven
 ETYM From PIE **sept^hṛn*.

ηεδος (hedos) /hedos/ NOUN. Q-STEM *atarum*
 SENSES seat
 ETYM From PIE **sédos*, from **sed-* (?).

ηεκος (hekos) /hekos/ NOUN. Q-STEM *atarum*
 SENSES power, strength
 ETYM From PIE **ségh^hos*, from **segh^h-* (?).

ηελος (helos) /helos/ NOUN. Q-STEM *atarum*
 SENSES swamp
 ETYM From PIE **sélos*.

ηελπος (helpos) /helpos/ NOUN. Q-STEM *atarum*
 SENSES grease, oil

ETYM From PIE **sélpos*, from **selp-* (?).

ηεμβασκις (hembaskis) /hembaskis/ NOUN. Q-STEM *atarum*
 SENSES balance

ETYM From Pre-Ab. **semb^háskis*, from PIE **b^háskis*, from **b^hask-* (?).

ηεμφος (hemfos) /hemfos/ UNDEFINED. Q-STEM *atarum*
 SENSES someone, something

ETYM From Pre-Ab. **sémk^wos*, from PIE **k^wós*.

ηενος (henos) /henos/ UNDEFINED. Q-STEM *atarum*
 SENSES old

ETYM From PIE **sénos*.

ηερκος (herkos) /herkos/ NOUN. Q-STEM *atarum*
 SENSES fence, enclosure

ETYM From PIE **sérkos*, from **serk-* (?).

ηερμυν (hermun) /hermun/ NOUN. Q-STEM *atarum*
 SENSES joy

ETYM From PIE **ǵ^hérmn*, from **ǵ^her-* (?).

ηερος (heros) /heros/ NOUN. Q-STEM *atarum*
 SENSES binding, union, agreement

ETYM From PIE **séros*, from **ser-* (?).

ηινδερ (hinder) /hinder/ UNDEFINED. Q-STEM *atarum*
 SENSES without+INS

ETYM From PIE **sntér*, from **sen-* (?).

ηισθος (hisvos) /hizvos/ UNDEFINED. Q-STEM *atarum*
 SENSES dry

ETYM From Pre-Ab. **siskwós*, from PIE **siskús*, from **sek-* (?).

ηο (ho) /ho/ UNDEFINED. Q-STEM *atarum*
 SENSES if, supposing that

ETYM From PIE **só*.

ηοθος (hovos) /hovos/ NOUN. Q-STEM *atarum*
 SENSES sap, resin

ETYM From PIE **sok^wós*. Beekes (2010) points out that Latin *sūcus* (whence °SUCUS°), while similar, is clearly deviant. However, as de Vaan (2008) notes, we find both **suk-* and **sug-* as zero grades, which only complicates it even further. If we posit an o-grade **souk-* and assume an early metathesis into **sokw-~sok^w-*, we may reconcile the two forms. However, the variation in velar remains problematic. This vacillation may be explained by looking for a non-Indo-European origin, such as Proto-Uralic **suwe*.

ηοθιος (hovjos) /hovjos/ NOUN. Q-STEM *atarum*
 SENSES dog

ETYM From PIE **sok^wýós*, from **sek^w-* (?). Albanian *shok*, while related, was borrowed from the Latin cognate.

ηολ()ῶος (hol()wos) /hol()wos/ UNDEFINED. Q-STEM *atarum*
 SENSES each£SG, every£SG, all£PL

ETYM From PIE **sol(h₂)wós*, from **selh₂-* (?).

ηολνος (holnos) /holnos/ UNDEFINED. Q-STEM *atarum*
 SENSES healthy, safe, whole

ETYM From PIE **solh₂nós*, from **selh₂-* (?).

ηολᾱ (holā) /hola:/ NOUN. Q-STEM *atarum*
 SENSES gall, bile

ETYM From PIE **ǵ^holh₃éh₂*, from **ǵ^helh₃-* (?). The Anlaut fricative in Latin is problematic.

ηομῶ (homvā) /homva:/ NOUN. Q-STEM *atarum*
 SENSES oracle, prophecy

ETYM From PIE **song^whéh₂*, from **seng^wh-* (?).

ηομος (homos) /homos/ UNDEFINED. Q-STEM *atarum*
 SENSES same

ETYM From PIE **somh_xós*, from **sem-* (?).

ηορμος (hormos) /hormos/ NOUN. Q-STEM *atarum*
 SENSES necklace

ETYM From PIE **sórmos* (), from **ser-* (?).

ηορνᾱ (hornā) /horna:/ NOUN. Q-STEM *atarum*
 SENSES bowels

ETYM From PIE **ǵ^hórh_xneh₂*, from **ǵ^herh_x-* (?). Beekes (2010) considers the appurtenance of the Latin and Albanian cognates to be doubtful because of the unexpected reflex of the first stop.

ηορῖος (horjos) /horjos/ NOUN. Q-STEM *atarum*
 SENSES swine

ETYM From Pre-Ab. **ǵ^hóryos*, from PIE **ǵ^hér*. Beekes (2010) mentions that the word may actually be substrate in origin. The secondary meaning of female genitalia, which is also present in the Greek reflex, eventually overtook the animal meaning in Carite.

ηοστις (hostis) /hostis/ NOUN. Q-STEM *atarum*
 SENSES guest

ETYM From PIE **ǵ^hóstis*, from **ǵ^hes-* (?).

ηοβερ (huber) /huber/ UNDEFINED. Q-STEM *atarum*
 SENSES above£+DAT, over£+ACC

ETYM From PIE **supér*.

ηυβνος (hubnos) /hubnos/ NOUN. Q-STEM *atarum*
 SENSES sleep, slumber

ETYM From PIE **supnós*, from **swep-* (?). Unlike most other sources, Matasović (2009) claims that the Celtic form derives from a zero grade formation rather than an o-grade. This vision is adopted in this dictionary.

ηυδος (hudos) /hudos/ NOUN. Q-STEM *atarum*
 SENSES liquid

ETYM From PIE **ǵ^hutós*, from **ǵ^hew-* (?). Proto-Germanic **gudq* ("god") may be a cognate as well.

- ἡνδερος (hunderos)** /hunderos/ UNDEFINED. Q-STEM *atarum*
 SENSES half
 ETYM From PIE **sm̥téros*, from **sem-* (?).
- ἡνδος (hundos)** /hundos/ NOUN. Q-STEM *atarum*
 SENSES victim
 ETYM From PIE **g^wh̥ntós* (), from **g^when-* (?).
- ἡυπο (hupo)** /hupo/ UNDEFINED. Q-STEM *atarum*
 SENSES under (stationary)ε+DAT, under (directional)ε+ACC
 ETYM From PIE **supo*.
- ἡωμος (hōmos)** /ho:mos/ UNDEFINED. Q-STEM *atarum*
 SENSES calm, easy, pleasant
 ETYM From PIE **sōmós*, from **sem-* (?).
- ἡϊκνις (hīknis)** /hi:knis/ UNDEFINED. Q-STEM *atarum*
 SENSES pale, slow
 ETYM From PIE **séh₁knis*, from **seh₁k-* (?).
- ἡϊμυν (hīmun)** /hi:mun/ NOUN. Q-STEM *atarum*
 SENSES seed
 ETYM From PIE **séh₁m̥n*, from **seh₁-* (?).
- ἡϊτλομ (hītloμ)** /hi:tlom/ NOUN. Q-STEM *atarum*
 SENSES age
 ETYM From PIE **séh₂itlom*, from **seh₂y-* (?).
- θενᾱ (venā)** /vena:/ NOUN. Q-STEM *atarum*
 SENSES woman
 ETYM From Pre-Ab. **g^wéneh₂*, from PIE **g^wén*, from **g^wen-* (?). The two Celtic terms were in fact distinct.
- θορᾱ (vorā)** /vora:/ NOUN. Q-STEM *atarum*
 SENSES meat used as food for pets
 ETYM From PIE **g^worh₃éh₂*, from **g^werh₃-* (?).
- θρεπος (vrepos)** /vrepos/ NOUN. Q-STEM *atarum*
 SENSES foal
 ETYM From PIE **g^wréb^hos*, from **g^wreb^h-* (?).
- θρᾱῶ (vrāwō)** /vra:wo:/ NOUN. Q-STEM *atarum*
 SENSES quern, millstone
 ETYM From Pre-Ab. **g^wréh₂wō*, from PIE **g^wréh₂us*, from **g^wreh₂-* (?).
- θρῦδος (vrūdos)** /vru:dos/ UNDEFINED. Q-STEM *atarum*
 SENSES slow
 ETYM From Pre-Ab. **g^wruh₂tós*, from PIE **g^wréh₂us*, from **g^wreh₂-* (?).
- θᾱμυν (vāmun)** /va:mun/ NOUN. Q-STEM *atarum*
 SENSES journey
 ETYM From PIE **g^wéh₂m̥n*, from **g^weh₂-* (?).

θῑῡος (vīwos) /vi:wos/ UNDEFINED. Q-STEM *atarum*
 SENSES alive

ETYM From PIE **g^wi^h₃wós*, from **g^wey^h₃-* (?).

ἰλμᾱ̃ (ilmā) /ilma:/ NOUN. Q-STEM *atarum*
 SENSES elm

ETYM From Pre-Ab. **l^hmeh₂*, from PIE **l^hmos*. The Germanic cognates are mentioned by Matasović (2009) but are missing in Kroonen (2013) and Ringe (2009). Almost undoubtedly of substrate origin.

Ἰμβυνδος (Imbundos) /imbundos/ NOUN. Q-STEM *atarum*
 SENSES mythological realm of the Chthonic deities

ETYM From Pre-Ab. **ḡb^hund^hós*, from PIE **b^hud^hnós*, from **d^hewb^h-* (?).

ἰμποδος (impodos) /impodos/ UNDEFINED. Q-STEM *atarum*
 SENSES undrinkable

ETYM From PIE **ḡph₃etós*, from **pe^h₃-* (?).

ἰν- (in-) /in-/ UNDEFINED. Q-STEM *atarum*
 SENSES ipsum

ETYM From PIE **ḡ-*.

κῡμυν (kymun) /ky:mun/ NOUN. Q-STEM *atarum*
 SENSES wave

ETYM From PIE **kéwh₁mṇ*, from **kewh₁-* (?).

καζνος (kaznos) /kaznos/ UNDEFINED. Q-STEM *atarum*
 SENSES gray, grey

ETYM From PIE **k^h₁snós*.

καμμυν (kammun) /kammun/ NOUN. Q-STEM *atarum*
 SENSES song

ETYM From PIE **kánmṇ*, from **kan-* (?).

καπρος (kapros) /kapros/ NOUN. Q-STEM *atarum*
 SENSES goat

ETYM From PIE **kápros*. While the Proto-Celtic voicing of **pr* to **br* is regular, the initial **g* is unusual. Matasović (2009) posits assimilation with the following **b* or contamination with Proto-Indo-European **g^hayd-*, which is not attested in Celtic and furthermore considered to be a loan (cf. °GHAYD°). de Vaan (2008) instead suggests that the voicing discrepancy is the result of **kápros* being a loan itself, a claim the phonemic **a* may confirm. Mallory (2006) suggests a derivation from Proto-Indo-European **kápr* “penis”, which is no less problematic.

κελτρομ (keltrom) /keltrom/ NOUN. Q-STEM *atarum*
 SENSES shield

ETYM From PIE **kél^htrom*, from **kel-* (?).

κενατρά (kenatrā) /kenatra:/ NOUN. Q-STEM *atarum*
 SENSES sister-in-law

ETYM From Pre-Ab. **h₁yénh₂treh₂*, from PIE **h₁yénh₂tēr*. The Armenian cognate is slightly problematic and may not be related after all.

κενστρομ (kenstrom) /kenstrom/ NOUN. Q-STEM *atarum*
 SENSES stinger

ETYM From PIE **ként^htrom*, from **kent-* (?).

κερδος (kerdos) /kerdos/ NOUN. Q-STEM *atarum*
 SENSES craft, art

ETYM From PIE **kérdos*, from **kerd-* (?).

κεῖϋς (kejūs) /keju:s/ NOUN. Q-STEM *atarum*
 SENSES friend

ETYM From PIE **kéywos* (), from **key-* (?).

κικῖᾱ (kikjā) /kikja:/ NOUN. Q-STEM *atarum*
 SENSES jay, magpie

ETYM From PIE **kíkʷeh₂*. Of onomatopoeic origin.

κινῖος (kinjos) /kinjos/ UNDEFINED. Q-STEM *atarum*
 SENSES fresh

ETYM From PIE **knyós*, from **ken-* (?).

κιρβος (kirbos) /kirbos/ NOUN. Q-STEM *atarum*
 SENSES fruit

ETYM From PIE **kṛpós*. A word with a slightly troublesome etymology. While the a-vocalism in Latin can easily be explained (see de Vaan (2008)), the Greek form is slightly more problematic. While de Vaan (2008) vouches for a zero grade with analogy to the verb, the Mycenaean attestation lacks the rhotic. Beekes (2010) suggests a non-Indo-European origin instead, which de Vaan (2008) finds unlikely given the presence of a Latino-Balto-Slavic verb. In any case, Carite shows the regular outcome of a zero grade.

κλεπος (klepos) /klepos/ NOUN. Q-STEM *atarum*
 SENSES theft

ETYM From PIE **klépos*, from **klep-* (?).

κλεϋος (klewos) /klewos/ NOUN. Q-STEM *atarum*
 SENSES fame, glory

ETYM From PIE **kléwos*, from **klew-* (?).

κλωρος (klōros) /klo:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES green

ETYM From PIE **g^hl_{h3}rós*, from **g^helh₃-* (?).

κλαδρος (klādroš) /kla:dros/ UNDEFINED. Q-STEM *atarum*
 SENSES smooth

ETYM From PIE **g^hl_{h2}d^hrós*, from **g^hleh₂d^h-* (?).

κλαρος (klāros) /kla:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES hard, harsh

ETYM From Pre-Ab. **k_lh₁rós*, from PIE **(s)k_lh₁rós*, from **(s)kelh₁-* (?).

κλαϋᾱ (klāwā) /kla:wa:/ NOUN. Q-STEM *atarum*
 SENSES key

ETYM From Pre-Ab. **kleh₂weh₂*, from PIE **(s)kleh₂weh₂*, from **(s)kleh₂w-* (?). The Slavic forms are problematic as the expected vowel colouring does not occur.

κλιτρᾱ (klitrā) /kli:tra:/ NOUN. Q-STEM *atarum*
 SENSES shelter

ETYM From PIE **kléytreh₂*, from **kley-* (?).

κοβου (kobom) /kobom/ NOUN. Q-STEM *atarum*
 SENSES divination

ETYM From PIE **kobom*, from **kob-* (?).

κοιμος (koimos) /kø:mos/ NOUN. Q-STEM *atarum*
 SENSES home

ETYM From PIE **kóymos*, from **key-* (?). The Greek verb is most likely a denominative of an unattested **κοίμος* (**koimos*), which would be formally identical to the Germano-Carite nouns. Beekes (2010) mentions a cognate in Proto-Slavic **sěmъja* which appears to be missing from Derksen (2008).

κολμος (kolmos) /kolmos/ NOUN. Q-STEM *atarum*
 SENSES reed, cane

ETYM From Pre-Ab. **kolh₂mos*, from PIE **kolh₂m* (), from **kelh₂-* (?).

κολσος (kolsos) /kolsos/ NOUN. Q-STEM *atarum*
 SENSES neck

ETYM From PIE **kólsos*. A derivation from the root **k^wel-* is sometimes suggested; however, the delabialisation in Germano-Carite would be irregular. Ringe (2009) specifically labels the formation as Post-Proto-Indo-European. Middle Irish *coll* “head, chief”, which is mentioned by Mallory (2006), is considered a loan from Latin by de Vaan (2008).

κομ (kom) /kom/ UNDEFINED. Q-STEM *atarum*
 SENSES with_ℓ+INS

ETYM From PIE **kóm*.

κοξᾱ (koxā) /koksa:/ NOUN. Q-STEM *atarum*
 SENSES hip, haunch

ETYM From PIE **kókseh₂*. Lithuanian *kiškà* may be related as well.

κορῖος (korjos) /korjos/ NOUN. Q-STEM *atarum*
 SENSES army

ETYM From PIE **kóryos* (), from **ker-* (?).

κος (kos) /kos/ UNDEFINED. Q-STEM *atarum*
 SENSES relative pronoun

ETYM From PIE **h₁yós*.

κοσλᾱ (koslā) /kosla:/ NOUN. Q-STEM *atarum*
 SENSES hazel

ETYM From PIE **kósleh₂*. Probably of substrate origin.

κρεπος (krepōs) /krepōs/ NOUN. Q-STEM *atarum*
 SENSES body

ETYM From PIE **krépos*, from **krep-* (?).

κρετος (kretos) /kretos/ NOUN. Q-STEM *atarum*
 SENSES strength

ETYM From PIE **krétos*, from **kret-* (?).

κριζομ (krizom) /krizzom/ NOUN. Q-STEM *atarum*
 SENSES heart

ETYM From Pre-Ab. **kṛdyóm*, from PIE **kér*, from **kerd-* (?).

κράνομ (krānom) /kra:nom/ NOUN. Q-STEM *atarum*
SENSES horn

ETYM From PIE **k₁h₂nóm*, from **kerh₂-* (?).

κράως (krāwos) /kra:wos/ NOUN. Q-STEM *atarum*
SENSES stag

ETYM From PIE **k₁h₂wós*, from **ker-* (?). For the presence of **h₂* in the Carite forms, see °HORN°.

κρίμυν (krīmun) /kri:mun/ NOUN. Q-STEM *atarum*
SENSES decision, verdict

ETYM From PIE **kréymn̥*, from **krey-* (?).

κρίτρομ (krītrom) /kri:trom/ NOUN. Q-STEM *atarum*
SENSES sieve

ETYM From Pre-Ab. **kréyd^hrom*, from PIE **(s)kréyd^hrom*, from **(s)ker-* (?).

κυρμῖς (kurmis) /kurmis/ NOUN. Q-STEM *atarum*
SENSES worm

ETYM From PIE **k^w₁mis*.

κωλος (kōlos) /ko:los/ NOUN. Q-STEM *atarum*
SENSES stem, stalk, straw

ETYM From Pre-Ab. **keh₂ulós*, from PIE **(s)keh₂ulós*, from **(s)keh₂u-* (?). We may be dealing with a Mediterranean word per Martirosyan (2010).

Κωμενᾶ (Kōmenā) /ko:mena:/ NOUN. Q-STEM *atarum*
SENSES mythological afterlife

ETYM From PIE **h₁yewh₂mh₁néh₂*, from **h₁yewh₂-* (?). Beekes (2010)'s assumption that the word is Pre-Greek is refuted by Nikolaev (2015), who proposes a plausible etymology that allows connection to Indo-Iranian cognates, as well as a perfect match to the Carite term for afterlife.

κάρα (kāra) /ka:ra:/ NOUN. Q-STEM *atarum*
SENSES female lover

ETYM From PIE **kéh₂reh₂*, from **keh₂-* (?). The semantic shift in Carite appears to be similar to the shift in Germanic, but is almost certainly an independent development.

κῖος (kjos) /kjos/ UNDEFINED. Q-STEM *atarum*
SENSES this

ETYM From PIE **k₁yós*.

κῖκος (kīkos) /ki:kos/ UNDEFINED. Q-STEM *atarum*
SENSES blind

ETYM From PIE **kéh₂ikos*, from **keh₂i-* (?).

κῖνος (kīnos) /ki:nos/ UNDEFINED. Q-STEM *atarum*
SENSES distal pronoun

ETYM From Pre-Ab. **keh₁énos*, from PIE **h₁énos*.

κῶρος (kwāros) /kwa:ros/ UNDEFINED. Q-STEM *atarum*
SENSES wild

ETYM From PIE **g^hweh₁rós*, from **g^hweh₁-* (?).

κῦπα (kūpā) /ku:pa:/ NOUN. Q-STEM *atarum*

SENSES handle

ETYM From PIE **kóh₂peh₂*, from **keh₂p-* (?).

Κῦρος (Kūros) /ku:ros/ NOUN. Q-STEM *atarum*

SENSES mythological hero

ETYM From PIE **kowh₁ros*, from **kewh₁-* (?). Matasović (2009) reconstructs the root as **kewh₂-* instead, but **h₁* would share its reflex with **h₂* in this environment anyway.

λυτερος (lyteros) /ly:teros/ UNDEFINED. Q-STEM *atarum*

SENSES free

ETYM From PIE **h₁léwd^heros*, from **h₁lewd^h-* (?).

λαθρος (lavros) /lavros/ UNDEFINED. Q-STEM *atarum*

SENSES fast, swift, nimble

ETYM From PIE **h₁lŋg^whrós*, from **h₁leng^wh-* (?).

λαῖϋς (lajūs) /laju:s/ UNDEFINED. Q-STEM *atarum*

SENSES left, north

ETYM From PIE **leh₂iwós*, from **leh₂-* (?).

λεκτρον (lektrom) /lektrom/ NOUN. Q-STEM *atarum*

SENSES bed

ETYM From PIE **lég^htrom*, from **leg^h-* (?).

λεντος (lentos) /lentos/ UNDEFINED. Q-STEM *atarum*

SENSES soft

ETYM From PIE **léntos*, from **len-* (?).

λιβρος (libros) /libros/ UNDEFINED. Q-STEM *atarum*

SENSES slippery, unstable

ETYM From PIE **h₃librós*.

λινδᾶ (lindā) /linda:/ NOUN. Q-STEM *atarum*

SENSES loins

ETYM From PIE **lŋd^héh₂*, from **lend^h-* (?). Ringe (2009) vouches for a **land^hom* origin of Proto-Germanic **landq*, of which Kroonen (2013) disapproves.

λοινις (loinis) /lɔ:nis/ NOUN. Q-STEM *atarum*

SENSES reed

ETYM From PIE **yoynis*.

λοισᾶ (loisā) /lɔ:sa:/ NOUN. Q-STEM *atarum*

SENSES furrow, agriculture

ETYM From PIE **lóyseh₂* (), from **leys-* (?).

λοιφνομ (loifnom) /lɔ:fnom/ NOUN. Q-STEM *atarum*

SENSES trash

ETYM From PIE **lóyk^wnom*, from **leyk^w-* (?).

λομβᾶ (lombā) /lomba:/ NOUN. Q-STEM *atarum*

SENSES mythological water spirit

ETYM From PIE **lomb^heh₂*, from **lem-* (?). Only Hyllested (2004) vouches for the connection between all etymons.

λωγος (lōgos) /lo:gos/ UNDEFINED. Q-STEM *atarum*
 SENSES pale, wealthy

ETYM From PIE **lewkós*, from **lewk-* (?).

λᾶρος (lāros) /la:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES destructive, ruinous

ETYM From PIE **h₃lh₁rós*, from **h₃elh₁-* (?).

λίμω (līmō) /li:mo:/ NOUN. Q-STEM *atarum*
 SENSES lake

ETYM From Pre-Ab. **léymō*, from PIE **(s)léymō*, from **(s)ley-* (?).

λῦγος (lūgos) /lu:gos/ NOUN. Q-STEM *atarum*
 SENSES grove, clearing

ETYM From PIE **lowkós*, from **lewk-* (?). The Germanic cognate only differs in stress.

λῦμον (lūmun) /lu:mun/ NOUN. Q-STEM *atarum*
 SENSES mud, dirt

ETYM From PIE **lúh_xm̥*, from **luh_x-* (?).

λῶξνᾱ (lūxnā) /lu:ksna:/ NOUN. Q-STEM *atarum*
 SENSES moon

ETYM From PIE **lówksneh₂*, from **lewk-* (?).

λῦτρομ (lūtrom) /lu:trom/ NOUN. Q-STEM *atarum*
 SENSES bath

ETYM From PIE **lówh₃trom*, from **lewh₃-* (?).

μαγρος (magros) /magros/ UNDEFINED. Q-STEM *atarum*
 SENSES thin, meager

ETYM From PIE **mh₂krós*, from **meh₂k-* (?).

Μαργονος (Margonos) /margonos/ NOUN. Q-STEM *atarum*
 SENSES pagan god of medicine and lunar chariot

ETYM From PIE **markónos*. In the Carite pantheon, this god continues one of the divine horse twins alongside °HORSETWIN2°, more specifically the young warrior, and his depiction varies from a young man riding a horse to a centaur. Functional equivalents include the Ancient Greek Διόσκοροι.

μεγᾱλος (megalos) /megalos/ UNDEFINED. Q-STEM *atarum*
 SENSES great, fantastic, awesome

ETYM From Pre-Ab. **mégh₂los*, from PIE **mégh₂s*, from **megh₂-* (?).

μελος (melos) /melos/ NOUN. Q-STEM *atarum*
 SENSES limb

ETYM From PIE **mélos*, from **mel-* (?).

μεμμυν (memmun) /memmun/ NOUN. Q-STEM *atarum*
 SENSES wisdom

ETYM From PIE **ménm̥*, from **men-* (?).

μεμρομ (memrom) /memrom/ NOUN. Q-STEM *atarum*
 SENSES flesh

ETYM From Pre-Ab. **mémsrom*, from PIE **méms*.

Μενεζϋῶ (Menezwā) /menezwa:/ UNDEFINED. Q-STEM *atarum*
 SENSES pagan goddess of mysticism

ETYM From PIE **meneswéh₂*, from **men-* (?).

μενος (menos) /menos/ NOUN. Q-STEM *atarum*
 SENSES mind

ETYM From PIE **ménos*, from **men-* (?).

μενσις (mensis) /mensis/ NOUN. Q-STEM *atarum*
 SENSES month

ETYM From Pre-Ab. **méh₁ḡsis*, from PIE **méh₁ḡs*.

μεξρι (mexri) /meksri/ UNDEFINED. Q-STEM *atarum*
 SENSES until+GEN

ETYM From PIE **még^hsri*, from **g^hes-* (?).

μεσσος (messos) /messos/ UNDEFINED. Q-STEM *atarum*
 SENSES middle

ETYM From PIE **méd^hyos*.

μικλᾱ (miklā) /mikla:/ UNDEFINED. Q-STEM *atarum*
 SENSES fog, mist

ETYM From PIE **h₃míg^hleh₂*.

μισδος (misdos) /mizdos/ NOUN. Q-STEM *atarum*
 SENSES reward, prize

ETYM From PIE **misd^hós*, from **mey-* (?). Given the feminine gender of the Germano-Slavic reflexes, Beekes (2010) mentions that the word may have been an old feminine, although he says the shift in gender would be unusual. Additionally, the neuter gender of the Sanskrit reflex doesn't clear up anything. Perhaps the feminine reflexes are old collectives? Anyhow, the Carite form perfectly mirrors the Greek reflex.

μοξ (mox) /moks/ UNDEFINED. Q-STEM *atarum*
 SENSES soon

ETYM From Pre-Ab. **moks*, from PIE **moks(u)*.

μορι (mori) /mori/ NOUN. Q-STEM *atarum*
 SENSES sea, standing water

ETYM From PIE **móri*.

μυλδᾱ (muldā) /mulda:/ NOUN. Q-STEM *atarum*
 SENSES soil, ground

ETYM From PIE **mld^héh₂*. Beekes (2010) argues that Ancient Greek μάλθη, which Mallory (2006) posits as cognate, is a Pre-Greek technical loan and thus unrelated. The Germanic cognate is not mentioned in Kroonen (2013) or Ringe (2009).

μυρδος (murdos) /murdos/ NOUN. Q-STEM *atarum*
 SENSES human

ETYM From PIE **mṛtós*, from **mer-* (?). The stressed zero grade in Germanic, as proven by the absence of Verner's Law, is clearly deviant when compared to the Greek and Sanskrit forms. In Latin, Slavic and Celtic, the **-wós* suffix from Proto-Indo-European **g^{wi}h₃wós* (whence "VIVUS") contaminated the original formation to different degrees. The semantic shift from "mortal" to "human" is extremely common, with there being a perfect parallel in Armenian ԹՄԹԹ as well as similar shifts in other words such as Latin *mortālis* and Ancient Greek βρότειος.

μυρῶς (murūs) /muru:s/ UNDEFINED. Q-STEM *atarum*
 SENSES ill, sick

ETYM From PIE **mṛwós*, from **mer-* (?).

μυσομ (musom) /musom/ NOUN. Q-STEM *atarum*
 SENSES moss, lichen, mould

ETYM From PIE **músom*, from **mews-* (?).

μᾶτρᾱ (mātrā) /ma:tra:/ NOUN. Q-STEM *atarum*
 SENSES mother

ETYM From Pre-Ab. **méh₂treh₂*, from PIE **méh₂tēr*.

μῖ (mī) /mi:/ UNDEFINED. Q-STEM *atarum*
 SENSES prohibition particle

ETYM From PIE **méh₁*.

μῖτος (mītos) /mi:tos/ NOUN. Q-STEM *atarum*
 SENSES autumn, fall

ETYM From PIE **h₂méh₁tos* (), from **h₂meh₁-* (?).

μῖτρομ (mītrom) /mi:trom/ NOUN. Q-STEM *atarum*
 SENSES ruler/measuring device

ETYM From PIE **méh₁trom*, from **meh₁-* (?).

μῦδαρομ (mūdarom) /mu:darom/ NOUN. Q-STEM *atarum*
 SENSES bowels, guts, intestines

ETYM From PIE **ǵh₂dh₂róm*, from **meh₂d-* (?).

ναγρός (nagros) /nagros/ UNDEFINED. Q-STEM *atarum*
 SENSES dead

ETYM From PIE **nekrós*, from **nek-* (?).

ναθρός (navros) /navros/ NOUN. Q-STEM *atarum*
 SENSES kidney

ETYM From PIE **neg^whrós* ().

νεβυν (nebun) /nebun/ UNDEFINED. Q-STEM *atarum*
 SENSES nine

ETYM From PIE **h₁néwη*.

νεβυντος (nebuntos) /nebuntos/ UNDEFINED. Q-STEM *atarum*
 SENSES ninth

ETYM From PIE **h₁néwηtos*.

νεδη (nedē) /nede:/ UNDEFINED. Q-STEM *atarum*
 SENSES not even

ETYM From Pre-Ab. **nedeht*, from PIE **de*.

νεκι (neki) /neki/ UNDEFINED. Q-STEM *atarum*
 SENSES negative marker

ETYM From PIE **nég^{hi}*.

νεμος (nemos) /nemos/ NOUN. Q-STEM *atarum*
 SENSES forest

ETYM From PIE **némos*, from **nem-* (?).

νεπελᾶ (nepelā) /nepela:/ NOUN. Q-STEM *atarum*

SENSES fumes, foul steam

ETYM From PIE **neb^heléh₂*, from **neb^h-* (?). It is likely a similar diminutive existed in Celtic.

νεπος (nepos) /nepos/ NOUN. Q-STEM *atarum*

SENSES cloud

ETYM From PIE **néb^hos*, from **neb^h-* (?).

νεπτις (neptis) /neptis/ NOUN. Q-STEM *atarum*

SENSES nephew

ETYM From Pre-Ab. **néptis*, from PIE **népōts*.

νεπτῖ (neptī) /nepti:/ NOUN. Q-STEM *atarum*

SENSES niece

ETYM From PIE **néptih₂*.

νεσυμθος (nesumvos) /nesumvos/ UNDEFINED. Q-STEM *atarum*

SENSES no one, nothing

ETYM From Pre-Ab. **nesṃk^wós*, from PIE **k^wós*.

νεϋε (newe) /newe/ UNDEFINED. Q-STEM *atarum*

SENSES or

ETYM From PIE **newe*.

νεϋος (newos) /newos/ UNDEFINED. Q-STEM *atarum*

SENSES new

ETYM From PIE **néwos*, from **new-* (?).

νηδεδος (nēdedos) /ne:dedos/ UNDEFINED. Q-STEM *atarum*

SENSES disgusting

ETYM From PIE **ṇh₁detós*, from **h₁ed-* (?).

νιζμος (nizmos) /nizmos/ UNDEFINED. Q-STEM *atarum*

SENSES clean

ETYM From PIE **nig^wtós*, from **neyg^w-* (?).

νιρφονος (nirfonos) /nirfonos/ NOUN. Q-STEM *atarum*

SENSES epithet (man-slayer)

ETYM From PIE **h₂n̥r̥g^whonós*, from **g^when-* (?). A very old epithet that appears to be a compound of the words that yield °NERO° and °GWHENMI°, meaning “man-slayer”. The Greek cognate is notoriously close but they may be independent formations.

νιρῖᾱ (nirjā) /nirja:/ NOUN. Q-STEM *atarum*

SENSES dream

ETYM From Pre-Ab. **h₃n̥r̥yéh₂*, from PIE **h₃én̥r̥*.

νισδος (nisdos) /nizdos/ NOUN. Q-STEM *atarum*

SENSES nest

ETYM From PIE **nisdós*, from **sed-* (?). Ringe (2009) reconstructs the Germanic reflex as **nistaz*, which would be the expected result. However, as shown by Kroonen (2013), all Germanic languages show a neuter gender, which means it's more than likely it was already neuter at Proto-Germanic times. The origin of the velar in the Slavic etymon is unknown and postdates the Balto-Slavic split.

νοθος (novnos) /novnos/ UNDEFINED. Q-STEM *atarum*
 SENSES naked

ETYM From Pre-Ab. **nog^wnós*, from PIE **nóǵ^ws*, from **neg^w-* (?).

νομун (nomun) /nomun/ NOUN. Q-STEM *atarum*
 SENSES name

ETYM From PIE **h₃nóm̥n̥*.

νοφσδοσῖᾱ (nofsdosjā) /novzdosja:/ UNDEFINED. Q-STEM *atarum*
 SENSES last night

ETYM From Pre-Ab. **nok^wttósye_{h2}*, from PIE **nók^wts*.

νωδος (nōdos) /no:dos/ UNDEFINED. Q-STEM *atarum*
 SENSES toothless

ETYM From PIE **ǵh₃dós*, from **h₃ed-* (?).

Νᾱγραδος (Nāgrados) /na:grados/ NOUN. Q-STEM *atarum*
 SENSES he who can not be woken

ETYM From PIE **ǵh₁gretós*, from **h₁ger-* (?).

νᾱνεμος (nānemos) /na:nemos/ UNDEFINED. Q-STEM *atarum*
 SENSES without wind, calm

ETYM From PIE **ǵh₂nh₁mós*, from **h₂enh₁-* (?).

Νᾱρζῶᾱ (Nārwā) /na:rwā:/ NOUN. Q-STEM *atarum*
 SENSES pagan river goddess

ETYM From Pre-Ab. **h₁ǵh₁ṛswéh₂*, from PIE **lorem*, from **h₁ers-* (?).

νῖδος (nīdos) /ni:dos/ NOUN. Q-STEM *atarum*
 SENSES shame, disgrace

ETYM From PIE **h₃néydos*, from **h₃neyd-* (?).

νῦ (nū) /nu:/ UNDEFINED. Q-STEM *atarum*
 SENSES now, already

ETYM From PIE **nū*.

ογετᾱ (ogetā) /ogeta:/ NOUN. Q-STEM *atarum*
 SENSES harrow

ETYM From PIE **h₂okéteh₂*, from **h₂ek-* (?). According to Beekes (2010), the connection to the Greek reflex is tentative at best because of apparent remodeling after Ancient Greek ὀξύς (which is also possibly non-Indo-European) and the presence of the Pre-Greek suffix *-iv-*. Furthermore, Kroonen (2013) vouches for a European origin instead. The actual Latin development into *-cc-* is unclear; de Vaan (2008) offers several convincing explanations. Mallory (2006) reconstructs a new root **h₁,h₂ek-*, possibly with a regular velar to explain the presence of /k/ in the Baltic forms; Derksen (2008) and Derksen (2015) explain this deviation as a borrowing from Germanic instead, vouching for the semantic distance between the Slavic and Balto-Germanic words. As it is preferable to retain the connection to Proto-Indo-European **h₂ek-* (“sharp”) or to simply consider it to be of non-Indo-European origin, the reconstruction of a separate root is unnecessary.

ογζοῶος (ogzowos) /ogzowos/ UNDEFINED. Q-STEM *atarum*
 SENSES eighth

ETYM From PIE **h₃ektówos*.

ογζῦ (ogzū) /ogzu:/ UNDEFINED. Q-STEM *atarum*
 SENSES eight

ETYM From PIE **h₃ek^téh₃*.

ογκος (onkos) /onkos/ NOUN. Q-STEM *atarum*
 SENSES elbow

ETYM From PIE **h₂ónkos* (), from **h₂enk-* (?).

ογμος (ogmos) /ogmos/ NOUN. Q-STEM *atarum*
 SENSES furrow

ETYM From PIE **h₂ógmos*, from **h₂eǵ-* (?).

οινος (oinos) /ø:nos/ UNDEFINED. Q-STEM *atarum*
 SENSES one

ETYM From PIE **h₃óynos*.

οισζος (oiszos) /ø:zzos/ UNDEFINED. Q-STEM *atarum*
 SENSES passable

ETYM From PIE **h₁oytyós*, from **h₁ey-* (?).

ολῦς (olūs) /olu:s/ UNDEFINED. Q-STEM *atarum*
 SENSES destructive, sinister, ominous

ETYM From PIE **h₃olh₁wós*, from **h₃elh₁-* (?).

ομβλος (omblos) /omblos/ NOUN. Q-STEM *atarum*
 SENSES navel, belly button

ETYM From PIE **h₃ṇb^hlós*, from **h₃neb^h-* (?). The vocalisation of **ḷ* in the Greek cognate may point towards a late thematicisation.

ονος (onos) /onos/ NOUN. Q-STEM *atarum*
 SENSES load, burden

ETYM From PIE **h₃énos*, from **h₃en-* (?).

ορδῦς (ordūs) /ordu:s/ UNDEFINED. Q-STEM *atarum*
 SENSES high

ETYM From PIE **h₃rd^hwós*, from **h₃erd^h-* (?).

ορπος (orpos) /orpos/ NOUN. Q-STEM *atarum*
 SENSES orphan

ETYM From PIE **h₃órb^hos* (), from **h₃erb^h-* (?).

ορσος (orsos) /orsos/ NOUN. Q-STEM *atarum*
 SENSES tail

ETYM From PIE **h₁órsos* (), from **h₁ers-* (?).

οσδος (osdos) /ozdos/ NOUN. Q-STEM *atarum*
 SENSES branch

ETYM From PIE **h₃ósdos* ().

οσμος (osmos) /osmos/ NOUN. Q-STEM *atarum*
 SENSES shoulder

ETYM From PIE **h₁ómsos*. The vocalism in Latin has widely been considered troublesome and is usually explained away as an old s-stem. Höfler (2017), however, posits an additional unknown laryngeal between **m* and **s* which, with a nominative singular o-grade, would not surface due to Saussure's Law. In the e-grade of the dual, however, it would, which is where the Latin form comes from. This view is adopted in this dictionary entry. For more information, please consult the source.

οστομ (ostom) /ostom/ NOUN. Q-STEM *atarum*
 SENSES bone

ETYM From Pre-Ab. **h₃ésth₁om*, from PIE **h₃ésth₁*.

οὔς (ojūs) /oju:s/ UNDEFINED. Q-STEM *atarum*
 SENSES only, sole, single, alone

ETYM From PIE **h_sóywos*.

οὔιγᾱ (owigā) /owiga:/ NOUN. Q-STEM *atarum*
 SENSES ewe

ETYM From Pre-Ab. **h₃ewikéh₂*, from PIE **h₃éwis*.

πυκᾱ (pykā) /py:ka:/ NOUN. Q-STEM *atarum*
 SENSES spruce, pine

ETYM From PIE **péwkeh₂*, from **pewk-* (?). Kroonen (2013) mentions this root also probably surfaces in Armenian ~~XXXXXXXX~~, where it would be the second member of the compound. Martirosyan (2010), however, does not mention this at all.

παδρος (padros) /padros/ NOUN. Q-STEM *atarum*
 SENSES father

ETYM From Pre-Ab. **ph₂trós*, from PIE **ph₂tér* (), from **peh₂-* (?).

παος (paos) /paos/ NOUN. Q-STEM *atarum*
 SENSES light

ETYM From PIE **b^héh₂os*, from **b^heh₂-* (?).

παργνος (pargnos) /pargnos/ UNDEFINED. Q-STEM *atarum*
 SENSES freckled

ETYM From PIE **perkⁿós*, from **perk-* (?).

παρος (paros) /paros/ NOUN. Q-STEM *atarum*
 SENSES spelt

ETYM From PIE **b^háros*, from **b^har-* (?).

πασζος (paszos) /pazzos/ UNDEFINED. Q-STEM *atarum*
 SENSES terrestrial

ETYM From PIE **pedyós*, from **ped-* (?).

πασκίς (paskis) /paskis/ NOUN. Q-STEM *atarum*
 SENSES weight

ETYM From PIE **b^háskis*, from **b^hask-* (?).

πεγγος (pengos) /pengos/ NOUN. Q-STEM *atarum*
 SENSES tar

ETYM From PIE **b^héng^hos*, from **b^heng^h-* (?).

πεδομ (pedom) /pedom/ NOUN. Q-STEM *atarum*
 SENSES step

ETYM From PIE **pedom*, from **ped-* (?).

πεκος (pekos) /pekos/ NOUN. Q-STEM *atarum*
 SENSES money, currency

ETYM From PIE **pékos*, from **pek-* (?).

πελνος (pelnos) /pelnos/ NOUN. Q-STEM *atarum*
 SENSES skin, hide

ETYM From PIE **pélno-* (?), from **pel-* (?).

πελος (pelos) /pelos/ NOUN. Q-STEM *atarum*
 SENSES cliff

ETYM From PIE **pélos*, from **pel-* (?).

πεμμος (pemmos) /pemmos/ UNDEFINED. Q-STEM *atarum*
 SENSES fifth

ETYM From PIE **pénk^wtos*.

πεμφε (pemfe) /pemfe/ UNDEFINED. Q-STEM *atarum*
 SENSES five

ETYM From PIE **pénk^we*.

περι (peri) /peri/ UNDEFINED. Q-STEM *atarum*
 SENSES about_{GEN}, through_{ACC}, for_{DAT}

ETYM From PIE **peri*.

περνᾶ (pernā) /perna:/ NOUN. Q-STEM *atarum*
 SENSES heel

ETYM From PIE **tpérsneh₂*. It is not clear if the shift from “heel” to “weakness” was influenced the myth of Achilles, but the similarity is too striking to be a mere coincidence. The underlying root is sometimes thought to be related to °HEEL₂°.

περυτι (peruti) /peruti/ UNDEFINED. Q-STEM *atarum*
 SENSES last year

ETYM From PIE **péruti*, from **wet-* (?).

πεσος (pesos) /pesos/ NOUN. Q-STEM *atarum*
 SENSES penis

ETYM From PIE **pésos*, from **pes-* (?).

πεστρομ (pestrom) /pestrom/ NOUN. Q-STEM *atarum*
 SENSES hoe

ETYM From PIE **b^héd^htrom*, from **b^hed^h-* (?).

πεταλομ (petalom) /petalom/ NOUN. Q-STEM *atarum*
 SENSES leaf

ETYM From PIE **péth₂lom*, from **peth₂-* (?).

πετατλομ (petatlom) /petatlom/ NOUN. Q-STEM *atarum*
 SENSES wing

ETYM From PIE **péth₂d^hlom*, from **peth₂-* (?).

πληνος (plēnos) /ple:nos/ UNDEFINED. Q-STEM *atarum*
 SENSES full

ETYM From PIE **plh₁nós*, from **pelh₁-* (?).

πλοῦος (plowos) /plowos/ NOUN. Q-STEM *atarum*
 SENSES sailing, voyage

ETYM From PIE **plowós*, from **plew-* (?). Beekes (2010) mentions a formally identical Russian *plov*, of which no further trace can be found.

πλᾶμ (plām) /pla:m/ UNDEFINED. Q-STEM *atarum*
 SENSES except ξ +GEN

ETYM From PIE **plh₂m*, from **pleh₂-* (?).

πλᾶμᾶ (plāmā) /pla:ma:/ NOUN. Q-STEM *atarum*
 SENSES hand

ETYM From PIE **plh₂méh₂*, from **pelh₂-* (?). The reconstruction Proto-Indo-European **pólh₂m* posited by Mallory (2006) is untenable.

πλί (plī) /pli:/ UNDEFINED. Q-STEM *atarum*
 SENSES too much

ETYM From PIE **plh₁í*, from **pleh₁-* (?).

πλῆϊοι (plūjom) /plu:jom/ NOUN. Q-STEM *atarum*
 SENSES ship

ETYM From PIE **plówyom*, from **plew-* (?).

πνοῦος (pnowos) /pnowos/ NOUN. Q-STEM *atarum*
 SENSES animal

ETYM From PIE **pnowós*, from **pnew-* (?). A noun without any formal correspondences in other languages. The Proto-Indo-European formation most likely meant “breather” and the semantic shift of such word to animal is widely attested, with examples including Latin *animal* and Proto-Germanic **deuzq* (but note that Proto-Celtic **dwosyos*, its cognate, refers to humans instead). Please refer to “PNEWMI” for further etymology and sources.

ποζμᾶ (poz mā) /pozma:/ NOUN. Q-STEM *atarum*
 SENSES sweat

ETYM From PIE **pok^wtéh₂*, from **pek^w-* (?).

ποιμω (poimō) /pø:mo:/ NOUN. Q-STEM *atarum*
 SENSES shepherd, herder

ETYM From PIE **póh₂imō*, from **peh₂-* (?).

ποιῶ (poiwā) /pø:wa:/ NOUN. Q-STEM *atarum*
 SENSES meadow

ETYM From PIE **póh₂iweh₂* (), from **peh₂-* (?).

πολγᾶ (polgā) /polga:/ NOUN. Q-STEM *atarum*
 SENSES fallow land

ETYM From PIE **polkéh₂*.

πολκος (polkos) /polkos/ NOUN. Q-STEM *atarum*
 SENSES stomach

ETYM From PIE **b^hólǵ^hos* (), from **b^helǵ^h-* (?).

- πολιον (poljom)** /poljom/ NOUN. Q-STEM *atarum*
 SENSES leaf
 ETYM From PIE **b^hólh₃yom*, from **b^hleh₃-* (?).
- πονδος (pondos)** /pondos/ NOUN. Q-STEM *atarum*
 SENSES boulder
 ETYM From Pre-Ab. **póndos*, from PIE **(s)póndos*, from **(s)pend-* (?).
- πορθος (porvos)** /porvos/ UNDEFINED. Q-STEM *atarum*
 SENSES violent, dangerous
 ETYM From PIE **b^horg^wos*.
- πορᾱ (porā)** /pora:/ NOUN. Q-STEM *atarum*
 SENSES time as an instance
 ETYM From PIE **b^horéh₂*, from **b^her-* (?).
- ποσζομ (poszom)** /pozzom/ NOUN. Q-STEM *atarum*
 SENSES grave
 ETYM From PIE **b^hod^hyóm*, from **b^hed^h-* (?).
- ποστι (posti)** /posti/ UNDEFINED. Q-STEM *atarum*
 SENSES afterξ+DAT, behindξ+DAT
 ETYM From Pre-Ab. **posti*, from PIE **pos*.
- ποτις (potis)** /potis/ NOUN. Q-STEM *atarum*
 SENSES husband
 ETYM From PIE **pótis*.
- ποτνῖ (potnī)** /potni:/ NOUN. Q-STEM *atarum*
 SENSES wife
 ETYM From PIE **pótnih₂*.
- πρη (prē)** /pre:/ UNDEFINED. Q-STEM *atarum*
 SENSES beforeξ+DAT
 ETYM From PIE **prh₂i*, from **preh₂-* (?).
- πρησθοῦς (prēsvwos)** /pre:zvowos/ NOUN. Q-STEM *atarum*
 SENSES high priest
 ETYM From PIE **preysg^wowós* (), from **g^wew-* (?).
- Πριονᾱ (Prionā)** /priona:/ NOUN. Q-STEM *atarum*
 SENSES pagan goddess of love and fertility
 ETYM From PIE **prih_xóneh₂*, from **preyh_x-* (?).
- πριος (prios)** /prios/ UNDEFINED. Q-STEM *atarum*
 SENSES free
 ETYM From PIE **prih_xós*, from **preyh_x-* (?).
- πρισδομ (prisdom)** /prizdom/ NOUN. Q-STEM *atarum*
 SENSES finger
 ETYM From PIE **prsth₂óm*, from **steh₂-* (?).

προ (pro) /pro/ UNDEFINED. Q-STEM *atarum*
 SENSES too, also

ETYM From PIE **pro*.

προμος (promos) /promos/ UNDEFINED. Q-STEM *atarum*
 SENSES first

ETYM From PIE **prómos*, from **per-* (?).

προτι (proti) /proti/ UNDEFINED. Q-STEM *atarum*
 SENSES at+DAT, in front of+DAT

ETYM From PIE **próti*.

προτῖφοι (protifom) /proti:fom/ NOUN. Q-STEM *atarum*
 SENSES face

ETYM From PIE **próti_h3k^wom*, from **h₃ek^w-* (?).

πρωγζος (prōgzos) /pro:gzos/ NOUN. Q-STEM *atarum*
 SENSES anus+singular, butt+plural, buttocks+plural, rump+plural

ETYM From PIE **proh₂któs*. The reconstruction **pr_h3któs* posited by Mallory (2006) is untenable.

πρᾶτρος (prātros) /pra:tros/ NOUN. Q-STEM *atarum*
 SENSES brother

ETYM From Pre-Ab. **b^hréh₂tros*, from PIE **b^hréh₂tēr* ().

πυγνος (pugnos) /pugnos/ NOUN. Q-STEM *atarum*
 SENSES fist

ETYM From PIE **puǵnós* (), from **pewǵ-* (?).

πυγᾶ (pugā) /puga:/ NOUN. Q-STEM *atarum*
 SENSES flight, escape

ETYM From PIE **b^hugéh₂*, from **b^hewǵ-* (?).

πυδλος (pudlos) /pudlos/ NOUN. Q-STEM *atarum*
 SENSES boy

ETYM From PIE **putlós*. Armenian 𐎱𐎠𐎼𐎿, mentioned as a cognate by Mallory (2006), is derived from a different root by Martirosyan (2010). de Vaan (2008) mentions Proto-Slavic **pŕtākŏ* as cognate, to which Derksen (2008) assigns no etymology.

πυλ(ε)νος (pult(e)nos) /pult(e)nos/ UNDEFINED. Q-STEM *atarum*
 SENSES large+of an area

ETYM From PIE **p_lth₂(e)nós*, from **pleth₂-* (?).

πυῖος (pujos) /pujos/ UNDEFINED. Q-STEM *atarum*
 SENSES small, little

ETYM From PIE **ph₂uyós*, from **peh₂w-* (?).

πᾶγᾶ (pāgā) /pa:ga:/ NOUN. Q-STEM *atarum*
 SENSES beech

ETYM From Pre-Ab. **b^heh₂ǵeh₂*, from PIE **b^heh₂ǵós*. This word was most likely feminine in Proto-Indo-European, with the noun class changing accordingly in Carite. The Germanic form is only formally identical without the **j*.

πᾶνος (pānos) /pa:nos/ UNDEFINED. Q-STEM *atarum*
 SENSES white

ETYM From PIE **b^heh₂nos*, from **b^heh₂-* (?).

πῦκος (pūkōs) /pu:kos/ UNDEFINED. Q-STEM *atarum*
 SENSES few, several

ETYM From PIE **péh₂ukos*, from **peh₂w-* (?).

πῦρος (pūros) /pu:ros/ NOUN. Q-STEM *atarum*
 SENSES wheat

ETYM From PIE **puh_xrós*, from **pewh_x-* (?). Beekes (2010) explains the variation in vowel length in Greek as the result of laryngeal metathesis, i.e. **ph_xurós*. If the short vowel is the result of pretonic shortening, i.e. Dybo's law, however, Ancient Greek πυρός is also formally identical to the Carite reflex. Despite the ability to reconstruct a Proto-Indo-European form, this word may be an old Wanderwort instead. Old English *fȳrs* is also mentioned, but no Proto-Germanic form can be found.

πῦρος (pūros) /pu:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES cheap

ETYM From PIE **péh₂uros*, from **peh₂w-* (?).

πῦς (pūss) /pu:ss/ UNDEFINED. Q-STEM *atarum*
 SENSES foot

ETYM From PIE **pód_s*, from **ped-* (?).

Πῦσω (Pūsō) /pu:so:/ NOUN. Q-STEM *atarum*
 SENSES pagan god of cattle, music and art

ETYM From PIE **péh₂usō*, from **peh₂-* (?).

πῦτλομ (pūtlom) /pu:tlom/ NOUN. Q-STEM *atarum*
 SENSES drinking cup

ETYM From PIE **péh₃tlom*, from **peh₃-* (?).

ρυμὸν (rymun) /ry:mun/ NOUN. Q-STEM *atarum*
 SENSES horsehair

ETYM From PIE **réwmp_h*.

ρυτός (rytos) /ry:tos/ NOUN. Q-STEM *atarum*
 SENSES copper, bronze

ETYM From PIE **h₁réwd^hos*, from **h₁rewd^h-* (?).

ρεθός (revos) /revos/ NOUN. Q-STEM *atarum*
 SENSES twilight, dusk

ETYM From PIE **h₁rég^wos*.

ρεῦος (rewos) /rewos/ NOUN. Q-STEM *atarum*
 SENSES countryside

ETYM From PIE **h_xréwos*, from **h_xrew-* (?).

ροβός (robos) /robos/ NOUN. Q-STEM *atarum*
 SENSES rape?

ETYM From PIE **h₁ropós* (), from **h₁rep-* (?).

ρυδρος (rudros) /rudros/ UNDEFINED. Q-STEM *atarum*
 SENSES red

ETYM From PIE **h₁rud^hrós*, from **h₁rewd^h-* (?).

ριγνι (rignī) /ri:gni:/ NOUN. Q-STEM *atarum*
 SENSES queen

ETYM From PIE **h₃réǵnih₂*, from **h₃reǵ-* (?).

ριμα̃ (rīmā) /ri:ma:/ NOUN. Q-STEM *atarum*
 SENSES number

ETYM From PIE **h₂réymeh₂*, from **h₂rey-* (?). The actual form of this root is not entirely clear. Matasović (2009) reconstructs an unknown root-final laryngeal and posits a zero grade formation to account for the long vowel; the full grade would result into **reimā*. However, as he points out, this extra laryngeal is not reflected in Greek. Kroonen (2013) considers **h₂rey-* to be a reanalysis of **h₂rh₁ey-*, an i-present to **h₂reh₁-*. In Germano-Carite, both **-ih_x-* and **-ey(h_x)-* result in **-ī-*, so the precise reconstruction is irrelevant for these branches.

ριξ (rix) /ri:ks/ UNDEFINED. Q-STEM *atarum*
 SENSES king

ETYM From PIE **h₃réǵs*, from **h₃reǵ-* (?).

ριπα̃ (rīpā) /ri:pa:/ NOUN. Q-STEM *atarum*
 SENSES steep slope

ETYM From PIE **h₁réypeh₂*, from **h₁reyp-* (?).

ριως (rīwos) /ri:wos/ NOUN. Q-STEM *atarum*
 SENSES river

ETYM From PIE **h₃rih_xwós*, from **h₃reyh_x-* (?). Mallory (2006) reconstructs the root as **h₁reyh_x-* instead.

ρυδος (rūdos) /ru:dos/ UNDEFINED. Q-STEM *atarum*
 SENSES angry

ETYM From PIE **h₁rowd^hós*, from **h₁rewd^h-* (?).

συκυρος (sykuros) /sy:kuros/ NOUN. Q-STEM *atarum*
 SENSES father-in-law

ETYM From PIE **swékuros*. The Armeno-Celtic cognates are derivations of the feminine equivalent, with the Celtic reflex being a derivation using **-Vnos* (often used to indicate possession) and the Armenian reflex being a compound with *ayr* ("man"). In Slavic, the consonant was altered through analogy with the feminine equivalent.

συξ (syx) /sy:ks/ UNDEFINED. Q-STEM *atarum*
 SENSES six

ETYM From PIE **swéks*.

συξτος (syxtos) /sy:kstos/ UNDEFINED. Q-STEM *atarum*
 SENSES sixth

ETYM From PIE **swékstos*.

συσζος (syszos) /sy:zzos/ UNDEFINED. Q-STEM *atarum*
 SENSES such

ETYM From Pre-Ab. **swédyos*, from PIE **swé*.

σῦτος (sytos) /sy:tos/ NOUN. Q-STEM *atarum*
 SENSES custom, habit

ETYM From PIE **swédʰos*.

σῦτρομ (sytrom) /sy:trom/ NOUN. Q-STEM *atarum*
 SENSES scythe

ETYM From PIE **kséwtrom*, from **ksew-* (?).

σαθνος (savnos) /savnos/ UNDEFINED. Q-STEM *atarum*
 SENSES holy, venerable

ETYM From PIE **tyegʷnós*, from **tyegʷ-* (?).

Σκανδι (Skandī) /skandi:/ NOUN. Q-STEM *atarum*
 SENSES pagan goddess of the moon, healing and the sea

ETYM From Pre-Ab. **skandih₂*, from PIE *(*s*)*kandih₂*, from *(*s*)*kand-* (?).

σκαῖ (skai) /skai:/ NOUN. Q-STEM *atarum*
 SENSES shadow

ETYM From PIE **skéh₂ih₂*.

σκελος (skelos) /skelos/ NOUN. Q-STEM *atarum*
 SENSES leg

ETYM From Pre-Ab. **skélos*, from PIE *(*s*)*kélos*, from *(*s*)*kel-* (?).

σκορομ (skorom) /skorom/ NOUN. Q-STEM *atarum*
 SENSES bark, bast

ETYM From Pre-Ab. **skoróm*, from PIE *(*s*)*koróm*, from *(*s*)*ker-* (?).

σκορᾶ (skorā) /skora:/ NOUN. Q-STEM *atarum*
 SENSES dung, faeces

ETYM From Pre-Ab. **skóreh₂*, from PIE **sókr̥*. The Carite formation appears to be a thematicisation of the original collective.

σλιῦος (slīwos) /sli:wos/ UNDEFINED. Q-STEM *atarum*
 SENSES blue

ETYM From Pre-Ab. **slih_xwós*, from PIE *(*s*)*lih_xwós*, from *(*s*)*leyh_x-* (?).

σμερος (smeros) /smeros/ NOUN. Q-STEM *atarum*
 SENSES part, share

ETYM From PIE **sméros*, from **smer-* (?).

σμῦλομ (smūlom) /smu:lom/ NOUN. Q-STEM *atarum*
 SENSES apple

ETYM From PIE **smh₂lom*.

σνᾶμυν (snāmun) /sna:mun/ NOUN. Q-STEM *atarum*
 SENSES fountain

ETYM From PIE **snéh₂m̥n*, from **sneh₂-* (?).

σνῑτλομ (snītlom) /sni:tlom/ NOUN. Q-STEM *atarum*
 SENSES awl

ETYM From Pre-Ab. **snéh₁dʰlom*, from PIE *(*s*)*néh₁dʰlom*, from *(*s*)*neh₁-* (?).

σπαδᾶ (spadā) /spada:/ NOUN. Q-STEM *atarum*
SENSES sword

ETYM From PIE **sph₂d^hh₁éh₂*, from **speh₂-* (?).

σπαρος (sparos) /sparos/ UNDEFINED. Q-STEM *atarum*
SENSES rich

ETYM From PIE **sph₁rós*, from **speh₁-* (?).

σπελκᾶ (spelkā) /spelka:/ NOUN. Q-STEM *atarum*
SENSES spleen

ETYM From PIE **spélǵ^heh₂*. The different reflexes showcase a wide variety of unexpected alterations and reconstructing a single root or form is difficult. Either way, the Carite form seems to perfectly mirror the Celtic form, including the reformed full grade without the laryngeal. For a more in-depth explanation, see Matasović (2009). Slavic cognates are not mentioned by Derksen (2008).

Σπεντρί (Spentri) /spentri:/ NOUN. Q-STEM *atarum*
SENSES pagan goddess of fate

ETYM From Pre-Ab. **spéntrih₂*, from PIE **(s)péntrih₂*, from **(s)pen-* (?).

σπενῖος (spenjos) /spenjos/ NOUN. Q-STEM *atarum*
SENSES breast

ETYM From Pre-Ab. **spénynos*, from PIE **pstén*. The original Anlaut, presumably **pst-*, is widely debated due to the variety in which it appears in different daughter languages.

σπερος (speros) /speros/ NOUN. Q-STEM *atarum*
SENSES starling

ETYM From Pre-Ab. **spéros*, from PIE **spér*, from **sper-* (?). The large amount of discrepancies may point towards a substrate origin, as is common for bird names. Ancient Greek ψάρ is probably unrelated according to Beekes (2010), but was included in this dictionary anyway.

σπερᾶ (sperā) /spera:/ NOUN. Q-STEM *atarum*
SENSES heel

ETYM From PIE **spérh_xeh₂*, from **sperh_x-* (?). The underlying root is sometimes thought to be related to °HEEL1°.

σπιγγος (spingos) /spingos/ NOUN. Q-STEM *atarum*
SENSES finch

ETYM From Pre-Ab. **spingos*, from PIE **(s)pingos*. Presumably a loanword from a common European source, as also hinted at by the similarity between different bird names in Greek.

σποινᾶ (spoinā) /spø:na:/ NOUN. Q-STEM *atarum*
SENSES foam

ETYM From Pre-Ab. **spéh₃ineh₂*, from PIE **(s)péh₃ineh₂*. Rather than **-eh₃i-*, we may also be dealing with **-oh_xi-*. The discrepancy between **-m-* and **-n-* in the descendants may stem from an original **-mn-* and/or from dissimilation of **-m-* due to the preceding labial plosive. Derksen (2015) suggests a connection to Proto-Indo-European **speh₁-*, which would have meant “to be filled to the rim” rather than “to succeed”.

σπονδᾶ (spondā) /sponda:/ NOUN. Q-STEM *atarum*
SENSES libation

ETYM From PIE **spondéh₂*, from **spend-* (?).

σρύμυν (srymun) /sry:mun/ NOUN. Q-STEM *atarum*
 SENSES brook, river, stream

ETYM From PIE **sréwm̥n̥*, from **srew-* (?).

σροκνᾶ (srokna) /srokna:/ NOUN. Q-STEM *atarum*
 SENSES nose

ETYM From PIE **sróg^hneh₂*, from **sreg^h-* (?). Martirosyan (2010) does not include the Celtic cognate and, on account of the missing prosthetic vowel in Armenian, posits a Mediterranean substrate origin instead. Additionally, since the Armeno-Greek forms imply **srung^h-*, their reflexes are hard to reconcile. It is likely that the root was originally onomatopoeic and later independent onomatopoeic alterations are responsible for the vacillation.

σροῦος (srowos) /srowos/ NOUN. Q-STEM *atarum*
 SENSES stream, brook

ETYM From PIE **srówos*, from **srew-* (?). Proto-Slavic **ostrovъ* would be identical, if not for the prefix.

σρίγος (srīgos) /sri:gos/ NOUN. Q-STEM *atarum*
 SENSES frost, cold

ETYM From PIE **srīh_xgos*.

σταδμος (stadmos) /stadmos/ NOUN. Q-STEM *atarum*
 SENSES place

ETYM From PIE **sth₂d^hmós* (), from **steh₂-* (?).

στεγμυν (stegmun) /stegmun/ NOUN. Q-STEM *atarum*
 SENSES blanket, cover

ETYM From Pre-Ab. **stégm̥n̥*, from PIE **(s)tégm̥n̥*, from **(s)teg-* (?).

στεγος (stegos) /stegos/ NOUN. Q-STEM *atarum*
 SENSES building

ETYM From Pre-Ab. **stégos*, from PIE **(s)tégos*, from **(s)teg-* (?).

Στενω (Stenō) /steno:/ NOUN. Q-STEM *atarum*
 SENSES mythological hammer

ETYM From Pre-Ab. **sténh_xō*, from PIE **(s)ténh_xō*, from **(s)tenh_x-* (?).

στερᾶ (sterā) /stera:/ NOUN. Q-STEM *atarum*
 SENSES star

ETYM From Pre-Ab. **h₂stéreh₂*, from PIE **h₂stér*, from **h₂eh₁s-* (?).

Στιρῖᾶ (Stirjā) /stirja:/ NOUN. Q-STEM *atarum*
 SENSES mythological priestess

ETYM From Pre-Ab. **h₂stryéh₂*, from PIE **h₂stér*, from **h₂eh₁s-* (?). Transparently an old derivation of °ASTER°.

στοικος (stoikos) /stø:kos/ NOUN. Q-STEM *atarum*
 SENSES path, way

ETYM From PIE **stóyg^hos* (), from **steyg^h-* (?).

στομυν (stomun) /stomun/ NOUN. Q-STEM *atarum*
 SENSES voice

ETYM From PIE **stóm̥n̥*.

στρωδος (strōdos) /stro:dos/ NOUN. Q-STEM *atarum*
SENSES valley

ETYM From PIE **strh₃tós* (), from **sterh₃-* (?).

σταῦμον (stāmun) /sta:mun/ NOUN. Q-STEM *atarum*
SENSES statue

ETYM From PIE **stéh₂m̥n̥*, from **steh₂-* (?).

στυῖον (stijom) /sti:jom/ NOUN. Q-STEM *atarum*
SENSES item, thing

ETYM From PIE **stih₂yóm*, from **steyh₂-* (?).

σωγινς (sōgins) /so:gins/ UNDEFINED. Q-STEM *atarum*
SENSES far, far away

ETYM From PIE **swek̑̑s*.

σῦρος (sūros) /su:ros/ NOUN. Q-STEM *atarum*
SENSES louse

ETYM From PIE **sworós* (), from **swer-* (?).

σῦος (sūjos) /su:jos/ UNDEFINED. Q-STEM *atarum*
SENSES own

ETYM From Pre-Ab. **swóyos*, from PIE **swé*.

τυμον (tymun) /ty:mun/ NOUN. Q-STEM *atarum*
SENSES cabbage

ETYM From PIE **téwh₂m̥n̥*, from **tewh₂-* (?).

τε(ι)μω (te(i)mō) /te(i)mo:/ NOUN. Q-STEM *atarum*
SENSES suckling, baby

ETYM From PIE **d^héh₁(i)mō*.

τεβμος (tebmos) /tebmos/ UNDEFINED. Q-STEM *atarum*
SENSES warm

ETYM From PIE **tepmós*, from **tep-* (?).

τεγος (tegos) /tegos/ NOUN. Q-STEM *atarum*
SENSES roof

ETYM From Pre-Ab. **tégos*, from PIE **(s)tégos*, from **(s)teg-* (?).

τεδρᾱ (tedrā) /tedra:/ NOUN. Q-STEM *atarum*
SENSES capercaillie

ETYM From PIE **tetréh₂*, from **teter-* (?). Most likely of onomatopoeic origin. A Slavic cognate appears to be missing from Derksen (2008).

τεζιος (tezjos) /tezjos/ UNDEFINED. Q-STEM *atarum*
SENSES sacred, divine, holy

ETYM From Pre-Ab. **d^hh₁syós*, from PIE **d^héh₁s*, from **d^heh₁-* (?).

τεκνομ (teknom) /teknom/ NOUN. Q-STEM *atarum*
SENSES child, offspring

ETYM From PIE **téknom*, from **tek-* (?).

τεκτλομ (tektlom) /tektlom/ NOUN. Q-STEM *atarum*
 SENSES adze

ETYM From Pre-Ab. **tétklom*, from PIE **tétk(d^h)lom*, from **tetk-* (?).

τελαμω (telamō) /telamo:/ NOUN. Q-STEM *atarum*
 SENSES earth

ETYM From PIE **télh₂mō*, from **telh₂-* (?).

τενος (tenos) /tenos/ NOUN. Q-STEM *atarum*
 SENSES snare, trap

ETYM From PIE **ténos*, from **ten-* (?).

τεξω (texō) /tekso:/ NOUN. Q-STEM *atarum*
 SENSES carpenter

ETYM From PIE **tétkō*, from **tetk-* (?).

τεπος (tepos) /tepos/ NOUN. Q-STEM *atarum*
 SENSES warmth

ETYM From PIE **tépos*, from **tep-* (?).

τερετρομ (teretrom) /teretrom/ NOUN. Q-STEM *atarum*
 SENSES auger

ETYM From PIE **térh₁trom*, from **terh₁-* (?).

τερμος (termos) /termos/ UNDEFINED. Q-STEM *atarum*
 SENSES strong

ETYM From PIE **d^hérmos*, from **d^her-* (?).

τερμυν (termun) /termun/ NOUN. Q-STEM *atarum*
 SENSES boundary, end

ETYM From PIE **térmn̥*, from **ter(h₂)-* (?).

τερσος (tersos) /tersos/ NOUN. Q-STEM *atarum*
 SENSES courage, bravery

ETYM From PIE **d^hérsos*, from **d^hers-* (?).

τιρζος (tirzos) /tirzos/ NOUN. Q-STEM *atarum*
 SENSES flat surface for food

ETYM From PIE **tṛsós*, from **ters-* (?). The a-vocalism in the Greek reflex is irregular. Beekes (2010) suggests a possible intermediate language it was loaned from. The Armenian cognate is not mentioned by Martirosyan (2010).

τολᾱ (tolā) /tola:/ NOUN. Q-STEM *atarum*
 SENSES meadow, dale

ETYM From Pre-Ab. **d^hóleh₂*, from PIE **d^hólos*, from **d^hel-* (?). Often reconstructed as **d^hólh₂os* — however, the only thing pointing towards a laryngeal would be the inclusion of Ancient Greek θαλάμη, which Beekes (2010) refutes. Likewise, the inclusion of Ancient Greek θόλος per Mallory (2006) should be discarded.

τορμος (tormos) /tormos/ NOUN. Q-STEM *atarum*
 SENSES hole, socket

ETYM From PIE **tórh₁mos* (), from **terh₁-* (?).

τριζος (trizzos) /trizzos/ UNDEFINED. Q-STEM *atarum*
SENSES third

ETYM From PIE *tr̥tyós.

τρογος (trogos) /trogos/ NOUN. Q-STEM *atarum*
SENSES wheel

ETYM From PIE *d^hrog^hós, from *d^hreg^h- (?). Matasović (2009) explains the voiceless velar in Celtic by assimilation from an original *-s (see also °HORTUS°).

τρῖς (trīs) /tri:s/ UNDEFINED. Q-STEM *atarum*
SENSES three

ETYM From PIE *tréyes.

τρῖστις (trīstis) /tri:stis/ UNDEFINED. Q-STEM *atarum*
SENSES annoyed

ETYM From PIE *tréystis.

τῦβνος (tubnos) /tubnos/ UNDEFINED. Q-STEM *atarum*
SENSES deep

ETYM From PIE *d^hub^hnós, from *d^hewb^h- (?).

τῦβρος (tubros) /tubros/ UNDEFINED. Q-STEM *atarum*
SENSES dark

ETYM From PIE *d^hub^hrós, from *d^hewb^h- (?).

τῦγδρᾱ (tugdrā) /tugdra:/ NOUN. Q-STEM *atarum*
SENSES daughter

ETYM From Pre-Ab. *d^hugtréh₂, from PIE *d^hugh₂tér.

τῦζνος (tuznos) /tuznos/ UNDEFINED. Q-STEM *atarum*
SENSES brown

ETYM From PIE *d^husnós, from *d^hews- (?).

τῦρᾱ (turā) /tura:/ NOUN. Q-STEM *atarum*
SENSES door

ETYM From PIE *d^huréh₂, from *d^hwer- (?).

τῶδᾱ (tōdā) /to:da:/ NOUN. Q-STEM *atarum*
SENSES people, nation

ETYM From PIE *tewtéh₂. The Celtic form may be from an original o-grade instead.

τῦκε (tīke) /ti:ke/ UNDEFINED. Q-STEM *atarum*
SENSES here

ETYM From Pre-Ab. *téyke, from PIE *só.

τῦκος (tīkos) /ti:kos/ NOUN. Q-STEM *atarum*
SENSES mound, wall

ETYM From PIE *d^héyǵ^hos, from *d^heyǵ^h- (?).

τῦμος (tūmos) /tu:mos/ NOUN. Q-STEM *atarum*
SENSES heap, pile

ETYM From PIE *d^hóh₁mos (), from *d^heh₁- (?).

τῦρος (tūros) /tu:ros/ NOUN. Q-STEM *atarum*
 SENSES bull

ETYM From PIE **tāwros*. Due to the extreme similarity to Proto-Semitic **tawr-* of the same meaning, it is likely this word was borrowed from one language into the other or from a common source. Kroonen (2013) assumes a Pre-Proto-Indo-European form **paur* which at some point was raised to **peur*; he draws a comparison to Etruscan 𐌑𐌒𐌓𐌔 for the change in diphthong. While the dental fricative would have been rendered as a stop in all extant Indo-European languages, a secondary approximation through /st/ would explain Proto-Germanic **steuraz*. Matasović (2018) mentions that Albanian *ter* may be a loan from Latin instead. It is unclear if the Balto-Slavic mobile accent originates from an original suffixal accent, which would contrast with Graeco-Carite, or if it is a later development.

υβελος (ubelos) /ubelos/ UNDEFINED. Q-STEM *atarum*
 SENSES bad, evil, wicked

ETYM From PIE **h₂upélos*, from **h₂wep-* (?).

υγγανος (unganos) /unganos/ UNDEFINED. Q-STEM *atarum*
 SENSES big, large

ETYM From Pre-Ab. **mǵh₂nós*, from PIE **méǵh₂s*, from **meǵh₂-* (?).

υγγᾶμ (ungām) /unga:m/ UNDEFINED. Q-STEM *atarum*
 SENSES very

ETYM From Pre-Ab. **mǵéh₂m*, from PIE **méǵh₂s*, from **meǵh₂-* (?).

υδερος (uderos) /uderos/ NOUN. Q-STEM *atarum*
 SENSES abdomen, belly

ETYM From PIE **udéros*. The presence of an unvoiced dental plosive in Latin can easily be explained through analogy. For a more in-depth explanation, see de Vaan (2008).

υθρος (uvros) /uvros/ UNDEFINED. Q-STEM *atarum*
 SENSES wet

ETYM From PIE **ug^wrós*, from **weg^w-* (?).

υσδερά (usderā) /uzdera:/ NOUN. Q-STEM *atarum*
 SENSES uterus

ETYM From PIE **udtéh₂*. The formation is a variation on Proto-Indo-European **udéros*, for which see °UTERUS°.

φαιδιρτος (fadirtos) /fadirtos/ UNDEFINED. Q-STEM *atarum*
 SENSES fourth

ETYM From Pre-Ab. **k^wetǵtos*, from PIE **k^wétǵtos*.

φαιδνομ (fadnom) /fadnom/ NOUN. Q-STEM *atarum*
 SENSES dowry

ETYM From PIE **h₁wednóm*, from **h₁wed-* (?).

φαιδῦρ (fadūr) /fadu:r/ UNDEFINED. Q-STEM *atarum*
 SENSES four

ETYM From Pre-Ab. **k^wetór*, from PIE **k^wetwór*.

φαρμος (farmos) /farmos/ UNDEFINED. Q-STEM *atarum*
 SENSES hot

ETYM From PIE **g^whermós*, from **g^wher-* (?).

φεντος (fentos) /fentos/ NOUN. Q-STEM *atarum*
 SENSES wind

ETYM From Pre-Ab. **h₂wéh₁ntos*, from PIE **h₂wéh₁nts*, from **h₂weh₁-* (?). The thematisation into a masculine o-stem is common to all post-Anatolian languages, and must predate the Carite vocalisation of consonant stems into i-stems.

φερος (feros) /feros/ NOUN. Q-STEM *atarum*
 SENSES heat

ETYM From PIE **g^whéros*, from **g^wher-* (?).

φεφλος (feflos) /feflos/ NOUN. Q-STEM *atarum*
 SENSES circle, wheel

ETYM From PIE **k^wék^wlos*, from **k^wel-* (?). Klein (2017) reconstructs an additional **h₁* before the thematic vowel.

φηδρος (fēdros) /fe:dros/ UNDEFINED. Q-STEM *atarum*
 SENSES smart, clever, intelligent

ETYM From PIE **g^wheh₂idrós*, from **g^wheh₂id-* (?).

φιδῶ (fidwā) /fidwa:/ NOUN. Q-STEM *atarum*
 SENSES widow

ETYM From Pre-Ab. **h₁wid^hwéh₂*, from PIE **h₁wid^héwh₂*. While the initial laryngeal is not always reconstructed, it is required for the Carite onset. The Albanian reflex may be a Latin loan.

φολπος (folpos) /folpos/ NOUN. Q-STEM *atarum*
 SENSES gulf, bay

ETYM From PIE **k^wólpos*, from **k^welp-* (?). The Greek reflex must have undergone dissimilation.

φολᾶ (folā) /fola:/ NOUN. Q-STEM *atarum*
 SENSES turning, cycle

ETYM From PIE **k^wóleh₂*, from **k^wel-* (?).

φος (fos) /fos/ UNDEFINED. Q-STEM *atarum*
 SENSES who?primary, what?primary, whoconjunctive, whatconjunctive

ETYM From PIE **k^wós*.

φοτερος (foteros) /foteros/ UNDEFINED. Q-STEM *atarum*
 SENSES which

ETYM From PIE **k^wóteros*.

φοψᾶ (fopsā) /fopsa:/ NOUN. Q-STEM *atarum*
 SENSES wasp

ETYM From PIE **h_xwób^hseh₂*, from **h_xweb^h-* (?). If an initial laryngeal is reconstructed, its identity is not agreed upon. Nonetheless, the presence of the initial φ (*f-*) in Carite points towards an original word-initial laryngeal.

ωμος (ōmos) /o:mos/ UNDEFINED. Q-STEM *atarum*
 SENSES raw, uncooked

ETYM From PIE **h₂oh₃mós*, from **h₂eh₃-* (?).

ωἶδος (ōjēdos) /o:jēdos/ NOUN. Q-STEM *atarum*
 SENSES eagle

ETYM From Pre-Ab. **h₂ewyetós*, from PIE **h₂éwis* ().

ἄπις (āpis) /a:pis/ UNDEFINED. Q-STEM *atarum*
 SENSES nice, friendly

ETYM From PIE **h₂éh₂pis*, from **h₂ep-* (?).

ἵγμυν (jygmun) /jy:gmun/ NOUN. Q-STEM *atarum*
 SENSES bridge

ETYM From PIE **yéwgm̥*, from **yewg-* (?).

ἱέως (jewos) /jewos/ NOUN. Q-STEM *atarum*
 SENSES broth, soup, sauce

ETYM From PIE **yéwh_xos*, from **yewh_x-* (?).

ἱέως (jewos) /jewos/ NOUN. Q-STEM *atarum*
 SENSES justice, law

ETYM From PIE **h₂yéwos*, from **h₂yew-* (?).

ἱυγος (jungos) /jungos/ UNDEFINED. Q-STEM *atarum*
 SENSES young

ETYM From PIE **h₂yuh₁ḱós*, from **h₂ey-* (?).

ἱυγομ (jugom) /jugom/ NOUN. Q-STEM *atarum*
 SENSES yoke

ETYM From PIE **yugóm*, from **yewg-* (?).

ἱυθῖος (juvīwos) /juvi:wos/ UNDEFINED. Q-STEM *atarum*
 SENSES everlasting, eternal, immortal

ETYM From Pre-Ab. **h₂yug^wih₃wós*, from PIE **g^wih₃wós*, from **g^weyh₃-* (?).

ἰᾶωτο (jāwot) /ja:wot/ UNDEFINED. Q-STEM *atarum*
 SENSES until+ACC

ETYM From PIE **yéh₂wot*.

ἱξ (īx) /i:ks/ UNDEFINED. Q-STEM *atarum*
 SENSES goat

ETYM From PIE **h₂éygs*, from **h₂eyg-* (?).

ἱξμᾶ (īxmā) /i:k̥sma:/ NOUN. Q-STEM *atarum*
 SENSES arrowhead

ETYM From PIE **h₂éyḱsmeh₂*.

ἱτος (itos) /i:tos/ NOUN. Q-STEM *atarum*
 SENSES bonfire

ETYM From PIE **h₂éyd^hos* (), from **h₂eyd^h-* (?).

ῥενδᾶ (wendā) /wenda:/ NOUN. Q-STEM *atarum*
 SENSES hair

ETYM From PIE **wénd^heh₂*, from **wend^h-* (?).

ῥεργομ (wergom) /wergom/ NOUN. Q-STEM *atarum*
 SENSES work

ETYM From PIE **wérḡom*, from **werg-* (?).

ϝερνᾱ (wernā) /werna:/ NOUN. Q-STEM *atarum*
 SENSES alder

ETYM From Pre-Ab. **wérneh*₂, from PIE **wérnos*, from **wer-* (?). The connection to the non-Celtic reflexes is uncertain.

ϝερστρομ (werstrom) /werstrom/ NOUN. Q-STEM *atarum*
 SENSES wrist, ankle

ETYM From PIE **wérttrom*, from **wert-* (?).

ϝιζος (wizos) /wizos/ NOUN. Q-STEM *atarum*
 SENSES poison, venom

ETYM From PIE **wisós*, from **weys-* (?). The Greek lengthening appears to be secondary. Martirosyan (2010) posits a related Armenian օրօն which would be formally identical to Latin *vēna*, which de Vaan (2008) does not mention.

ϝλιζμομ (wlizmom) /wlizmom/ NOUN. Q-STEM *atarum*
 SENSES dew

ETYM From PIE **wlik^wtóm*, from **wleyk^w-* (?).

ϝοικος (woikos) /wø:kos/ NOUN. Q-STEM *atarum*
 SENSES room, chamber

ETYM From PIE **wóykos*, from **weyk-* (?). As evidenced by Gothic 𐌿𐌹𐌿𐌹𐌿𐌹, the Germanic branch also contained a reflex; however, neither Kroonen (2013) nor Ringe (2009) mention the exact Proto-Germanic form.

ϝοργος (worgos) /worgos/ NOUN. Q-STEM *atarum*
 SENSES worker

ETYM From PIE **worgós*, from **wérg-* (?). An old agent noun unique to Carite of Indo-European age related to °*WERGOMWORK*°.

ϝοργᾱ (worgā) /worga:/ NOUN. Q-STEM *atarum*
 SENSES wrath, ire

ETYM From PIE **worǵéh*₂, from **wérg-* (?).

ϝορτοφς (wortofs) /wortofs/ UNDEFINED. Q-STEM *atarum*
 SENSES quail

ETYM From PIE **wórtok^ws*.

ϝριγνος (wrignos) /wrignos/ UNDEFINED. Q-STEM *atarum*
 SENSES stiff

ETYM From PIE **wriknós*, from **wreyk-* (?).

ϝιλομ (wīlom) /wi:lom/ NOUN. Q-STEM *atarum*
 SENSES tin

ETYM From Pre-Ab. **wáylom*, from PIE **wáy*.

ϝιρος (wīros) /wi:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES true, real

ETYM From PIE **wéh₁ros*, from **weh₁-* (?).

ϝ (ū) /u:/ UNDEFINED. Q-STEM *atarum*
 SENSES οὐvocative particle, oh!

ETYM From PIE **ó*.

ὄθνις (ūvnis) /u:vnis/ NOUN. Q-STEM *atarum*
 SENSES ploughshare

ETYM From PIE **wog^whnís*.

ὄκος (ūkos) /u:kos/ NOUN. Q-STEM *atarum*
 SENSES chariot

ETYM From PIE **wóg^hos* (), from **weǵ^h-* (?).

ὄρος (ūros) /u:ros/ UNDEFINED. Q-STEM *atarum*
 SENSES careful, cautious

ETYM From PIE **worós*, from **wer-* (?).

ὄσος (ūsos) /u:sos/ NOUN. Q-STEM *atarum*
 SENSES ear

ETYM From Pre-Ab. **h₂éwsos*, from PIE **h₂óws*, from **h₂ew-* (?).

Ἰσοςᾶ (Ūsosā) /u:sosa:/ NOUN. Q-STEM *atarum*
 SENSES pagan goddess of life and day

ETYM From Pre-Ab. **h₂éwsosēh₂*, from PIE **h₂éwsōs*, from **h₂ews-* (?). Beekes (2010) also connects Proto-Celtic **wāri-* (“sunrise, east”) through **h₂wōsri-*. Matasović (2009), however, prefers Proto-Indo-European **wesr*. While the meaning strongly correlates to **h₂ews-*, the lengthened o-grade through Schwebeablaut feels rather far-fetched.

ὄφρλομ (ūflom) /u:ftlom/ NOUN. Q-STEM *atarum*
 SENSES word, messagePL

ETYM From PIE **wók^wtlom*, from **wek^w-* (?).

ὄϊ (ūj) /u:j/ UNDEFINED. Q-STEM *atarum*
 SENSES alas

ETYM From PIE **wáy*.

ὄϊομ (ūjom) /u:jom/ NOUN. Q-STEM *atarum*
 SENSES egg

ETYM From PIE **h₂ōwyóm*.
